Advanced System Modelling and Simulation with Block Diagram Languages Nicholas M. Karayanakis, 1995-06-09
Advanced System Modelling and Simulation with Block Diagram Languages explores and describes the use of block languages in dynamic modelling and simulation. The application of block diagrams to dynamic modelling is reviewed not only in terms of known components and systems but also in terms of the development of new systems. Methods by which block diagrams clarify the dynamic essence of systems and their components are emphasized throughout the book and sufficient introductory material is included to elucidate the book's advanced material. Widely used continuous dynamic system simulation CDSS languages are analyzed and their technical features are discussed. This self-contained resource includes a review section on block diagram algebra and applied transfer functions, both of which are important mathematical subjects relevant to the understanding of continuous dynamic system simulation.

Advanced Information Processing in Automatic Control (AIPAC'89) R. Husson, 2014-05-23
Information Processing is a key area of research and development and the symposium presented state of the art reports on some of the areas which are of relevance in automatic control, fault diagnosis and system reliability. Papers also covered the role of expert systems and other knowledge based systems which are needed to cope with the vast quantities of data generated by large scale systems. This volume should be considered essential reading for anyone involved in this rapidly developing area.

SYSTEM SIMULATION, MODELLING AND LANGUAGES PANNEERSELVAM, R., SENTHILKUMAR, P., 2013-01-31
Designed as a text for undergraduate students B Tech B E of Computer Science and Engineering and IT Mechanical Engineering and Mechatronics Engineering and postgraduate students M Tech M E M Sc of Computer Science and Engineering and IT and Industrial Engineering as well as for Bachelor and Master of Computer Applications BCA MCA, this well organized book gives an in depth analysis of the concepts of system simulation modelling and simulation languages. The book provides detailed discussions on the fundamental and advanced concepts of simulation. The book begins with the concept of system and the different terminologies associated with the system. Then it presents the different methods of random number generation and their tests. Besides the text dwells on different probability distributions and their random variates which are used in the simulation model and describes various simulation languages such as GPSS Simula I SIMSCRIPT CSL GASP OPS 3 DYNAMO SIMAN and SLAM II. Further it gives a comprehensive coverage of different queueing systems with illustrative examples as well as the logics of simulation model for both single server and parallel server queueing systems. The concluding chapters deal extensively with GPSS language, Arena simulation software and ProModel simulation software.

Key Features: Follows a step by step approach to derive the test results. Gives a large number of solved examples and well designed chapter end questions. Includes several real life Case Studies to illustrate the concepts discussed.
