ACM Workshop on Digital Rights Management ,2003 Applied Cryptography and Network Security ,2005 **Cryptography and Coding** ,2005 **User's Guide to Cryptography and Standards** Alexander W. Dent,Chris J. Mitchell,2005 With the scope and frequency of attacks on valuable corporate data growing enormously in recent years a solid understanding of cryptography is essential for anyone working in the computer network security field This timely book delivers the hands on knowledge you need offering comprehensive coverage on the latest and most important standardized cryptographic techniques to help you protect your data and computing resources to the fullest Rather

than focusing on theory like other books on the market this unique resource describes cryptography from an end user perspective presenting in depth highly practical comparisons of standards and techniques **American Book Publishing Record** ,2004 *Proceedings of the Twenty-Second Annual ACM Symposium on Principles of Distributed Computing* ,2003 This paper presents an efficient asynchronous protocol to compute RSA inverses with respect to a public RSA modulus N whose factorization is secret and shared among a group of parties Given two numbers x and e the protocol computes y such that $ye \equiv x \pmod{N}$ A synchronous protocol for this task has been presented by Catalano Gennaro and Halevi Eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a Byzantine agreement sub protocol Our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a Byzantine agreement primitive Hence it leads to efficient asynchronous protocols for threshold signatures and for Byzantine agreement based on the strong RSA assumption without the use of random oracles **Proceedings** ,2008
