*Aeronautical Research in Germany* Ernst Heinrich Hirschel, Horst Prem, Gero Madelung, 2004-02-12 This English language edition of Aeronautical Research in Germany recounts and celebrates the considerable contributions made in Germany to the invention and ongoing development of aircraft. Publisher description *German Fighter Aircraft in World War I* Mark C. Wilkins, 2019-11-19 This fully illustrated volume explores German military aviation during WWI through archival photographs and authentically detailed replicas. Fighter aircraft were developed during World War I at an unprecedented rate as nascent air forces sought to achieve and maintain air supremacy. German manufacturers innovated at top speed while constantly scrutinizing the development of new enemy aircraft. The Germans also utilized the concept of modular engineering which allowed them to disassembled or reassembled their aircraft quickly in the field. The pinnacle of their aeronautical innovations was the iconic Fokker D VII, the only aircraft specifically mentioned in the Treaty of Versailles which forbade Germany from building it after the war. *German Fighter Aircraft in World War I* explores how German fighter aircraft were developed during the war, the advancements and trials that made the Fokker D VII possible and the different makes and types of aircraft. Using unpublished images including photographs of surviving aircraft, archive images and models and replicas, this volume shows details of aircraft that were kept top secret during the war. Extensively illustrated with 140 photos and ten color profiles, this is will be essential reading for all WWI aviation enthusiasts and modelers.

*The Origins of Surface-to-Air Guided Missile Technology* James Mills, 2022-10-21 Author James Mills presents an amazing detailed history review of the German surface to air guided missile technology development. Military Review World War II saw the appearance of numerous revolutionary armaments on both sides of the conflict that would radically change the nature of warfare from jet aircraft to the ballistic missile and the atomic bomb. The greatest conflagration in history also saw the conception of the first surface to air guided missile systems technology pioneered by German scientists and engineers through an extensive development program which ran from 1942 to 1945. Although the program did not achieve its main objective to introduce a functional weapon system into the Luftwaffe air defense network, German research and development in most aspects of the technology was ahead of comparable research in the United Kingdom and the United States. The history of the transfer of German SAM technology to the Allies after 1945 has previously been overshadowed by the well published transfers of the V 1 and V 2 guided missiles. This book presents the first complete history of Germany's wartime development of surface to air missile SAM technology, how the Allies acquired this secret research towards the end of World War II in Europe and in the early postwar period and how they then exploited this knowledge.

*Big Science and Research Infrastructures in Europe* Katharina C. Cramer, Olof Hallonsten, 2020-08-28 This
