

# GENERAL

This installation and maintenance instruction sheet of the solenoid is a general supplement to the particular IUM sheet for this valve. The identification is made by prefix DU to the catalogue number. Always use both IUM sheets for installing and maintaining the solenoid valve.

# DESCRIPTION

The solenoid valves are designed in accordance with Annex II of the European Directive 94/9/EC and CENELEC standards EN 13463-1, EN 50614 and EN 50281-1-1. Classification II 3D IP67.

# INSTALLATION

ASCO Numatics components are intended to be used only within the technical characteristics as specified on the nameplate. Changes to the equipment are only allowed after consulting the manufacturer or its representative. These solenoid valves are intended for installation in potentially explosive atmospheres, Group II dusts (Group D, category 3). The surface temperature classification depends on wattage and ambient temperature and is stated on the nameplate. Depending on the ambient temperature/wattage, a heat resistant cable, suitable for temperature as indicated on the nameplate, must be used.

# ELECTRICAL INSTALLATION

Wiring must comply with local and national regulations of explosion proof equipment. To make connection to the coil terminals, remove solenoid cover. Strip the outer insulation of the cable over approx. 30 mm and the insulation from the leads over 8 mm. Insert wires through the cable gland or conduit hub and connect wires to the terminals of the coil. Connect cable ground wire to the internal ground terminal. Keep some slack in the leads between cable entry and coil to avoid excessive strain on the leads. Assemble the cable gland and tighten the elastomer compression seal so that it fits tightly around the cable. When the retaining clip/nut is unscrewed, the solenoid can be rotated 360° to select the most favorable position for the cable entry. Tighten retaining clip/nut securely and close the enclosure. The solenoid housing is provided with an external connection facility for an earthing or bonding conductor.

**NOTE: THE STANDARD CABLE GLAND ACCEPTS CABLES WITH OVERALL O.D. from 7 to 12 mm.**

# CAUTION

Electrical load must be within the range stated on the nameplate. Failure to stay within the electrical range of the coil rating results in damage to or premature failure of the coil. It will also invalidate the approval.

# SERVICE

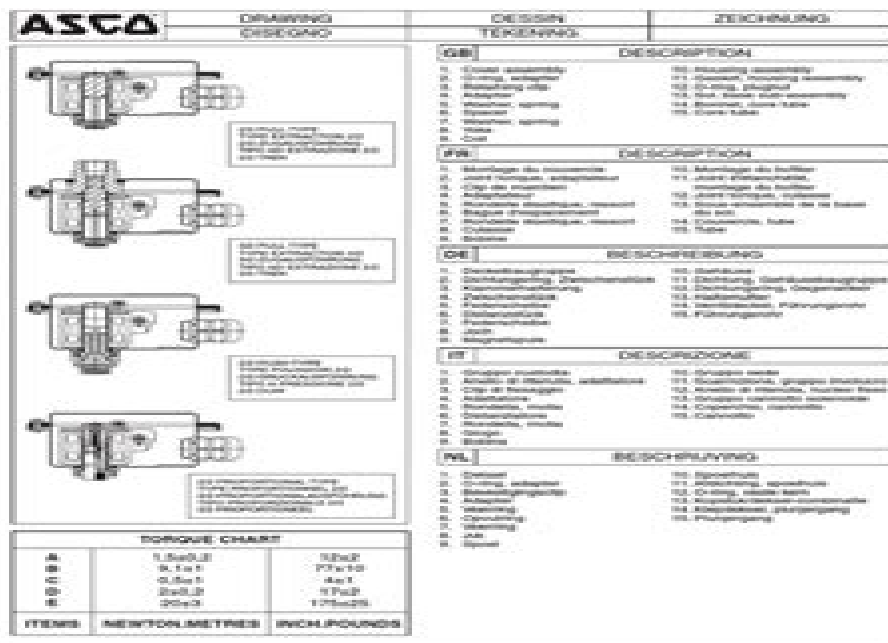

To prevent the possibility of personal or property damage, do not touch the solenoid. It can become hot under normal operation conditions. If the solenoid valve is easily accessible, the installer must provide protection preventing accidental contact.

# MAINTENANCE

Maintenance depends on service conditions. Periodic cleaning is recommended, the timing of which will depend on the media and service conditions. During servicing, components should be examined for excessive wear. A complete set of internal parts is available as a spare parts kit. If a problem occurs during installation/maintenance or in case of doubt please contact ASCO Numatics or authorized representative. **CAUTION:** Before servicing the solenoid valve, turn off electrical power, depressurize valve and vent fluid to a safe area. Solenoid must be fully reassembled as the housing and internal parts complete the magnetic circuit. In case of any replacement of parts by the user, the traceability of the final product can not be guaranteed by ASCO Numatics. Wrong assembly will invalidate the approval.
