Rosa-Hilda Chavez, Javier de J. Guadarrama, 2014-09-30 Recent Technologies in the capture of CO₂ provides a comprehensive summary on the latest technologies available to minimize the emission of CO₂ from large point sources like fossil fuel power plants or industrial facilities. This ebook also covers various techniques that could be developed to reduce the amount of CO₂ released into the atmosphere. The contents of this book include chapters on oxy fuel combustion in fluidized beds, gas separation membrane used in post combustion capture, minimizing energy consumption in CO₂ capture processes through process integration, characterization and application of structured packing for CO₂ capture, calcium looping technology for CO₂ capture and many more. Recent Technologies in capture of CO₂ is a valuable resource for graduate students, process engineers and administrative staff looking for real case analysis of pilot plants. This eBook brings together the research results and professional experiences of the most renowned work groups in the CO₂ capture field. *Scale-Up Processes* Jamal Chaouki, Rahmat Sotudeh-Gharebagh, 2021-09-20 Common scale up methods are conventional where the blind piloting is essential. This imposes huge investment and leads to failures mostly in solid processing. However, the limitations of resources, current shortcomings, short time to market demand are forced companies to minimize piloting. With these situations in mind, current digitalization outlook and computational facilities, we proposed and developed a novel iterative scale up method with case studies which highly expedites the process innovation through the following key sequences:
