Advances In Large Margin Classifiers Neural Information Processing:

    Advances in Large Margin Classifiers Alexander J. Smola,2000 The book provides an overview of recent developments in large margin classifiers examines connections with other methods e g Bayesian inference and identifies strengths and weaknesses of the method as well as directions for future research The concept of large margins is a unifying principle for the analysis of many different approaches to the classification of data from examples including boosting mathematical programming neural networks and support vector machines The fact that it is the margin or confidence level of a classification that is a scale parameter rather than a raw training error that matters has become a key tool for dealing with classifiers This book shows how this idea applies to both the theoretical analysis and the design of algorithms The book provides an overview of recent developments in large margin classifiers examines connections with other methods e g Bayesian inference and identifies strengths and weaknesses of the method as well as directions for future research Among the contributors are Manfred Opper Vladimir Vapnik and Grace Wahba   *Machine Learning and Knowledge Discovery in Databases* Hendrik Blockeel,Kristian Kersting,Siegfried Nijssen,Filip Železný,2013-08-28 This three volume set LNAI 8188 8189 and 8190 constitutes the refereed proceedings of the European Conference on Machine Learning and Knowledge Discovery in Databases ECML PKDD 2013 held in Prague Czech Republic in September 2013 The 111 revised research papers presented together with 5 invited talks were carefully reviewed and selected from 447 submissions The papers are organized in topical sections on reinforcement learning Markov decision processes active learning and optimization learning from sequences time series and spatio temporal data data streams graphs and networks social network analysis natural language processing and information extraction ranking and recommender systems matrix and tensor analysis structured output prediction multi label and multi task learning transfer learning bayesian learning graphical models nearest neighbor methods ensembles statistical learning semi supervised learning unsupervised learning subgroup discovery outlier detection and anomaly detection privacy and security evaluation applications and medical applications   **Advanced Lectures on Machine Learning** Shahar Mendelson,Alexander J.
