Asce Manual 110:

Sedimentation Engineering American Society of Civil Engineers. Task Committee for the Preparation of the Manual on Sedimentation, Environmental and Water Resources Institute (U.S.). ASCE Task Committee to Expand and Update Manual 54, 2008 MOP 110 presents extensive advances in methods of investigation measurement and analysis in the specialized field of sedimentation engineering

Fluid Mechanics of Environmental Interfaces, Second Edition Carlo Gualtieri, Dragutin T. Mihailovic, 2012-11-21 Environmental Fluid Mechanics EFM studies the motion of air and water at several different scales the fate and transport of species carried along by these fluids and the interactions among those flows and geological biological and engineered systems EFM emerged some decades ago as a response to the need for tools to study problems of flow and transport in rivers estuaries lakes groundwater and the atmosphere it is a topic of increasing importance for decision makers engineers and researchers alike The second edition of the successful textbook Fluid Mechanics of Environmental Interfaces is still aimed at providing a comprehensive overview of fluid mechanical processes occurring at the different interfaces existing in the realm of EFM such as the air water interface the air land interface the water sediment interface the surface water groundwater interface the water vegetation interface and the water biological systems interface Across any of these interfaces mass momentum and heat are exchanged through different fluid mechanical processes over various spatial and temporal scales In this second edition the unique feature of this book considering all the topics from the point of view of the concept of environmental interface was maintained while the chapters were updated and five new chapters have been added to significantly enlarge the coverage of the subject area The book starts with a chapter introducing the concept of EFM and its scope scales processes and systems Then the book is structured in three parts with fifteen chapters Part one which is composed of four chapters covers the processes occurring at the interfaces between the atmosphere and the surface of the land and the seas including the transport of dust and the dispersion of passive substances within the atmosphere Part two deals in five chapters with the fluid mechanics at the air water interface at small scales and sediment water interface including the advective diffusion of air bubbles the hyporheic exchange and the tidal bores Finally part three discusses in six chapters the processes at the interfaces between fluids and biotic systems such as transport processes in the soil vegetation lower atmosphere system turbulence and wind above and within the forest canopy flow and mass transport in vegetated open channels transport processes to and from benthic plants and animals and coupling between interacting environmental interfaces Each chapter has an educational part which is structured in four sections a synopsis of the chapter a list of keywords that the reader should have encountered in the chapter a list of questions and a list of unsolved problems related to the topics covered by the chapter The book will be of interest to graduate students and researchers in environmental sciences civil engineering and environmental engineering geo physics atmospheric science meteorology limnology oceanography and applied mathematics

Experimental Hydraulics: Methods, Instrumentation, Data

Processing and Management Marian Muste, Dennis A. Lyn, David Admiraal, Robert Ettema, Vladimir Nikora, Marcelo H. Garcia, 2017-07-28 This is the first volume of a two volume guide to designing conducting and interpreting laboratory and field experiments in a broad range of topics associated with hydraulic engineering Specific guidance is provided on methods and instruments currently used in experimental hydraulics with emphasis on new and emerging measurement technologies and methods of analysis Additionally this book offers a concise outline of essential background theory underscoring the intrinsic connection between theory and experiments This book is much needed as experimental hydraulicians have had to refer to guidance scattered in scientific papers or specialized monographs on essential aspects of laboratory and fieldwork practice The book is the result of the first substantial effort in the community of hydraulic engineering to describe in one place all the components of experimental hydraulics Included is the work of a team of more than 45 professional experimentalists who explore innovative approaches to the vast array of experiments of differing complexity encountered by today s hydraulic engineer from laboratory to field from simple but well conceived to complex and well instrumented The style of this book is intentionally succinct making frequent use of convenient summaries tables and examples to present information All researchers practitioners and students conducting or evaluating experiments in hydraulics will find this book useful

Scouring H.N.C. Breusers, A.J. Raudkivi, 2020-08-13 Information and technical data concerning scouring erosion caused by water fl in rivers and streams More specifically how certain structures exaggerate this natural process by restricting water flow causing constriction and loc scour Material presented is from both field studies and laboratories

Guide to Stability Design Criteria for Metal Structures Theodore V. Galambos, 1998-06-15 This book provides simplified and refined procedures applicable to design and to accessing design limitations and offers guidance to design specifications codes and standards currently applied to the stability of metal structures

Hydrology SAIKIA, MIMI DAS, DAS, MADAN MOHAN, 2009-12 The book starts with the hydrologic cycle which is the central concept of hydrology Then it moves on to basics of hydrometeorology abstraction losses like infiltration runoff in different forms instantaneous unit hydrograph IUH and its mathematical concepts like convolution integral synthetic unit hydrograph SUH and S hydrograph Finally the text concludes with estimation of flood by empirical equations and different flood frequency analysis and hydrology of basin management which deals with soil conservation water shed management and control of soil erosion that are very important for agricultural engineering
