Detailed attention is also paid to the applications of artificial intelligence, machine learning and data science technology in psychiatry and to their role in the development of new hypotheses which in turn promise to lead to new discoveries and treatments. Emerging research methods for precision medicine are discussed as are a variety of novel theoretical frameworks for research such as theoretical psychiatry, the developmental approach to the definition of psychopathology and the theory of constructed emotion. The concluding section considers novel interventions and treatment avenues including psychobiotics, the use of neuromodulation to augment cognitive control of emotion and the role of the telomere/telomerase system in psychopharmacological interventions.
