  - b. bowling ball
  - c. Hummer
- d. WHY did you choose the ones you circled? These objects have more mass so they will have more kinetic energy rolling down a hill.
8. In the picture below, when does the swinger have the most potential energy? The swinger has the most potential energy at the A position.

When does the swinger have the most kinetic energy? The swinger has the most potential energy at the B position.

When does the swinger switch from potential to kinetic energy? The swinger switches from potential to kinetic energy as she reaches the top of her swing (potential to kinetic) and the bottom of her swing (kinetic to potential).

9. If an object has more potential energy, how does this affect that object's kinetic energy? If an object's potential energy increases, the object's kinetic energy will also increase.
