RADIOACTIVE DATING GAME DIRECTIONS

Now that we understand radioactive decay and half-lives, we can use them to determine how old rocks or fossils are.

1. Click the "Dating Game" tab at the top of the screen.
2. You can drag the probe to different items on or below the surface of the earth. The probe tells you how much of the original element is still in the rock or fossil. You can measure C-14 or U-238, whichever works better for the item you are measuring.
3. You can use the graph to match the percent of element remaining, and then use the time shown to estimate the age of the rock or fossil.
4. Let's do an example:
 - a. Drag the probe to the dead tree to the right of the house.
 - b. Look at the probe reading: it tells you that there is 97.4% of the original C-14 remaining in the dead tree.
 - c. Now find the green arrows on the graph at the top of the screen. Drag those arrows right or left until the top line tells you that the C-14 percentage is 97.4%, the reading from the probe.
 - d. When you get the graph to read 97.4%, it tells you that the time has been 229 years.
 - e. Type this number into the box for "Estimate age of dead tree" and click "Check Estimate".
 - f. You should get a green smiley face, indicating that you have correctly figured out the age of the dead tree.

Answer Key Phet Radioactive Dating Game:

Distance Education Paul Birevu Muyinda, 2012-09-19 Education has become the number one demanded commodity for social and economic transformation for both developing and developed economies. Thus the number of persons going and returning to school has become too big to be handled by existing brick and mortar learning institutions. Besides the majority of lifelong learners do not have the time to become full time students. Distance education is becoming the solution to the aforementioned challenges. It has been defined as the mode of study where the learner is separated in time and space from the institution and tutors providing the tuition.
