

Cosmic Chemistry: Understanding Elements

The Periodic Table: Atoms, Elements, and Isotopes

TEACHER TEXT

The following is teacher background information and should only be used with students after they have completed the interactive periodic table lesson.

CLASSIFICATION

Classification is an important science process skill. In the interactive simulation, students will classify elements based on their physical and chemical properties. This process is part of a larger realm, which is the unifying concept of systems order and organization. According to *The National Science Education Standards*, "The natural and designed world is complex; it is too large and complicated to investigate and comprehend all at once. Scientists and students learn to define small portions for the convenience of investigation. The units of investigation can be referred to as 'systems'." The periodic table represents such a system. Systems can be organized into a way that is useful. The standards point out that the "Types of organization include the periodic table of elements and the classification of organisms. Physical systems can be described at different levels of organization-such as fundamental particles, atoms, and molecules."

WHAT IS NEXT?

Background information for teachers follows. The four sections include:

- The Atom
- The Periodic Table
- Isotopes
- Oxygen Isotopes and the Genesis Mission

ATOMS AND ELEMENTS

An atom is the basic structure from which all matter is composed, in the same manner as a brick is the basic structure from which a wall is built. Although atoms are too small to be seen with our eyes, scientists have long had indirect evidence for the existence of atoms. We can now use the world's most powerful scanning tunneling microscopes to "see" the magnified images of atoms and to study surface reaction sites on an atom-by-atom basis.

Figure 1

Just as a brick is basic to the structure of a wall, an atom is basic to the structure of matter.
