Department of Labor and Industrial Relations,1983 **A Model of Work-Based Learning** Joseph A. Raelin,2018 A comprehensive model of work based learning is illustrated combining explicit and tacit forms of knowledge and theory and practice modes of learning at both individual and collective levels The model is designed to bring together epistemic contributions which are typically studied in isolation The learning types produced from the model represent processes the intersection of which can contribute to the development of a comprehensive theory for integrating learning and work At the individual level work based learning might start with conceptualization which provides practitioners with a means to challenge the assumptions underlying their practice In experimentation they engage their conceptual knowledge in such a way that it becomes contextualized or grounded However within the world of practice in applying theoretical criteria or advanced analytical techniques one confronts technical cultural moral and personal idiosyncrasies which defy categorization Hence experience is required to reinforce the tacit knowledge acquired in experimentation In fact learning acquired through experience often referred to as implicit learning is the foundation for tacit knowledge and can be used to solve problems as well as make reasonable decisions about novel situations Nevertheless reflection is required to bring the inherent tacit knowledge to the surface It thus contributes to the reconstruction of meaning At the collective level conceptualization again makes a contribution in

informing spontaneous inquiry but is now embedded within the more formal methods of applied science. Scientists seek to describe and explain social reality through the manipulation of theoretical propositions using the rules of hypothetico deductive logic. The theories of applied science are often not helpful to practitioners however unless they are incorporated into practice. This is the purview of action learning wherein real time experience especially problems occurring within one's own work setting constitutes the primary subject matter. As practitioners come together by being involved with one another in action they may become a community of practice wherein they learn to construct shared understanding amidst confusing and conflicting data. Hence community of practice returns knowledge back into its context such that groups learn to observe and experiment with their own collective tacit processes in action. Action science is called upon to bring the individuals and group's mental models often untested and unexamined into consciousness. It is a form of reflection in action which attempts to discover how what one did contributed to an unexpected or expected outcome taking into account the interplay between theory and practice. Applications of the model can spur conceptual and practical developments that might lead to a comprehensive theory of work based learning. The discussion takes up such issues as transition links between learning types their segmentation by function or process and implications for epistemology. A sample program incorporating many of the learning types in the model is demonstrated. The paper argues that all eight types of learning need to be brought into consideration if learners are to achieve proficiency and become critical while learning at work.
