Dyslexia Oliver P.

Moynihan, 2002 Researchers have devoted considerable attention to how people learn to read specifically how they recognise, pronounce and understand printed words. These studies are helping to illuminate not only the normal process of learning to read but also the problems that may underlie dyslexia a condition in which people are unable to acquire a high degree of reading skill despite adequate intelligence and training. When reading instruction begins children as well as adult learners already possess large spoken word vocabularies. Their initial task is to learn how these spoken words correspond to written alphabetic symbols. Impairments in this reading skill are often seen among children who have problems learning in school. Dyslexia is a brain based type of learning disability that specifically impairs a person's ability to read. These individuals typically read at levels significantly lower than expected despite having normal intelligence. Although the disorder varies from person to person common characteristics among people with dyslexia are difficulty with phonological processing, the manipulation of sounds and/or rapid visual verbal responding.

Basic Mechanisms in Cognition and Language with Special Reference to Phonological Problems in Dyslexia Curt von Euler, Ingvar Lundberg, Rodolfo Riascos Llinás, 1998 Hardbound An international constellation of leading scientists in the fields of linguistics, language development, cognitive sciences, neuropsychology and psychology have contributed to this excellent work. Their contributions elucidate a variety of important aspects of crucial mechanisms in cognition and language processing. Important issues highlighted include the early development of these mechanisms as well as the effects of weaknesses in these mechanisms in terms of language learning deficits in developmental dyslexia. Based on lectures given at a multidisciplinary conference the volume is written in a

universal style to accommodate scientists outwith their own fields The book will be invaluable to a broad spectrum of professionals dealing directly or indirectly with the remediation of individuals afflicted with learning difficulties
