textbook ensures readers are equipped with the essential knowledge and skills to effectively promote and support breastfeeding mothers. Breastfeeding is a major public health issue. Not only does breastmilk provide all the nutrients a baby needs for their first six months, but research shows it also helps to protect infants from infection and reduce obesity as well as helping to protect mothers from some diseases in later life. Although many women want to breastfeed, rates drop rapidly in the first days and weeks after giving birth. Women need the support of their midwives and health visitors when establishing breastfeeding and throughout their children's infancy. This comprehensive and accessible text covers anatomy and physiology, building relationships, essential skills and good practice guidance dealing with common problems, public health considerations, mothers needing additional support, babies with special needs and complementary feeding and weaning. Suitable for midwifery and nursing students as well as practitioners undertaking continuing professional development.

Evidence based Care for Breastfeeding Mothers is designed to aid learning. Each chapter begins with specific learning outcomes linked to the Baby Friendly Learning Outcomes, key fact boxes, clinical scenarios and activities.

Solid Starts for Babies Solid Starts, 2025-04-01. The definitive guide to introducing real food to babies from the board certified pediatric feeding pros trusted by millions of parents around the world. Led by a multidisciplinary team of licensed pediatric feeding professionals, Solid Starts has emerged as the go-to resource for modern families searching for a research-based approach to solid food introduction to babies. In their debut book, they debunk the myth that baby food is necessary and show how from the moment that baby is ready to begin the transition from breast or bottle to solid food, baby can enjoy almost any food the same food that you want to eat with some basic safety modifications. In this book, they share how to cultivate curiosity, build trust at the table and get out of the way at mealtime so babies can do what they were born to do: eat. How the early introduction to many flavors and textures before age one builds baby's palate and familiarity with food before the opinionated toddler years. Why food need not be pureed and why six month old babies are developmentally capable of eating real food. Why allowing baby to grab hold and eat food on their own maximizes sensory motor learning, fosters problem solving skills and can actually decrease the risk of choking. The nutritional, developmental and psychological benefits to sharing the same food that you like to eat with baby. Techniques and guidance for sharing family meals with baby during each development window from four months of age through early toddlerhood. The latest evidence on choking safety, food allergens, nutrition, food shapes and sizes and how recommendations are rapidly changing. With practical research-backed strategies, Solid Starts for Babies helps parents nurture confidence and sets up families for mealtime joy.
