Annual Reports in Computational Chemistry David A. Dixon, 2015-12-15 **Drug Metabolism Prediction** Johannes Kirchmair, 2014-06-26 The first professional reference on this highly relevant topic for drug developers pharmacologists and toxicologists The authors provide more than a systematic overview of computational tools and knowledge bases for drug metabolism research and their underlying principles They aim to convey their expert knowledge distilled from many years of experience in the field In addition to the fundamentals computational approaches and their applications this volume provides expert accounts of the latest experimental methods for investigating drug metabolism in four dedicated chapters The authors discuss the most important caveats and common errors to consider when working with experimental data Collating the knowledge gained over the past decade this practice oriented guide presents methods not only used in drug development but also in the development and toxicological assessment of cosmetics functional foods agrochemicals and additives for consumer goods making it an invaluable reference in a variety of disciplines **Chemical Reactivity** Savaş Kaya, Laszlo von Szentpaly, Goncagul Serdaroglu, Lei Guo, 2023-05-15 The growth of technology for chemical assessment has led to great developments in the investigation of chemical reactivity in recent years but key information is often dispersed across many different research fields Combining both original principles and the cutting edge theories used in chemical reactivity analysis Chemical Reactivity Volume 1 present the latest developments in theoretical chemistry and its application for the assessment of chemical processes Beginning with an exploration of different theories and principles relating to electronic structure and reactivity of confined electronic systems the book goes on to highlight key information on such topics as Dyson orbitals target ion overlaps reaction fragility magnetizability principles and the Fukui function Density Functional Theory is discussed in relation to numerous different principles and approaches with further information on constrained methods and diabatic models bonding evolution theory orbital based population analysis models and charge transfer models and Quantum chemistry and QTAIM Consolidating the knowledge of a global team of experts in the field Chemical Reactivity Volume 1 Theories and Principles is a useful resource for both students and researchers interested in gaining greater understanding of the principles and theories underpinning chemical reactivity analysis Provides readers with the key information needed to gain a good overview of contemporary chemical reactivity studies and a clear understanding of the theory behind state of the art methods in the field Highlights advances in the computational descriptions of reactivity including reactivity in confined environments conceptual density functional theory and multi reference quantum chemistry Provides comprehensive coverage by consolidating the knowledge of many well known researchers in the field from around the world *Lead Generation, 2 Volume Set* Jörg Holenz, 2016-06-27 In this comprehensive two volume resource on the topic senior lead generation medicinal chemists present a coherent view of the current methods and strategies in industrial and academic lead generation This is the first book to combine both standard and innovative approaches in comparable breadth and depth including several recent

successful lead generation case studies published here for the first time Beginning with a general discussion of the underlying principles and strategies individual lead generation approaches are described in detail highlighting their strengths and weaknesses along with all relevant bordering disciplines like e g target identification and validation predictive methods molecular recognition or lead quality matrices Novel lead generation approaches for challenging targets like DNA encoded library screening or chemical biology approaches are treated here side by side with established methods as high throughput and affinity screening knowledge or fragment based lead generation and collaborative approaches Within the entire book a very strong focus is given to highlight the application of the presented methods so that the reader will be able to learn from real life examples The final part of the book presents several lead generation case studies taken from different therapeutic fields including diabetes cardiovascular and respiratory diseases neuroscience infection and tropical diseases The result is a prime knowledge resource for medicinal chemists and for every scientist involved in lead generation
