

### Incomplete and Codominance Worksheet

Answer the following questions. Provide a punnett square to support your answers where indicated. Express probabilities as percentages.

1. Explain the difference between incomplete dominance and codominance:

Incomplete = both alleles are expressed and the phenotype is a "blend"

Codominance = both alleles are expressed and the phenotype is a mixture or patches of both of them

2. In some chickens, the gene for feather color is controlled by codominance. The allele for black is B and the allele for white is W. The heterozygous phenotype is known as erminette.
  - a. What is the genotype for black chickens? BB
  - b. What is the genotype for white chickens? WW
  - c. What is the genotype for erminette chickens? BW

3. If two erminette chickens were crossed, what is the probability that: (use a Punnett square)

- a. They would have a black chick? = 25%

	B	W
B	BB	BW
W	BW	WW

50% of the offspring have genotype BW, 25% are BB, and 25% are WW. This means that 50% of the offspring are erminette, 25% are black, and 25% are white.

- b. They would have a white chick? =25%

(see above punnet square)
