Newly Hired Teachers of Science Julie A. Luft, Shannon L. Dubois, 2015-12-09 Supporting newly hired science teachers has taken on an increased importance in our schools. This book shares the most current information about the status of newly hired science teachers, different ways in which to support newly hired science teachers, and different research approaches that can provide new information about this group of teachers. Chapters in the book are written by those who study the status of beginning science teachers, mentor new teachers, develop induction programs, and research the development of new science teachers. *Newly Hired Teachers of Science* is for administrators who have new science teachers in their schools and districts, professionals who create science teacher induction programs, mentors who work closely with new science teachers, educational researchers interested in studying new science teachers, and even new science teachers. This is a comprehensive discussion about new science teachers that will be a guiding document for years to come. **Introduction to Biology** Alan Axelrod, 1999 A complete guide with questions, answers, and practice tests in the field of biology. **Handbook of College Science Teaching** Joel J. Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist. It includes explicit evidence-based guidelines for educators regarding the teaching, learning, and assessment of biological research competencies. The book also provides practical teacher guides and exemplars of assignments and assessments. It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain. This book contributes to the growth of public understanding of biological issues, including scientific literacy and the crucial importance of evidence-based decision making around public policy.
