This book is about our quest over the centuries from ancient Greece onwards for pattern in the rich diversity of life How did our ancestors think that living creatures first came to be each fitting so well to its specific environment Does biodiversity have a purpose What biodiversity exists beyond what our eyes can see Do dragons and unicorns exist How did the world begin how did order emerge and were there several Creation events Reproduction resembles Creation in that order appears out of nothing form out of matter Can different reproduction modes increase biodiversity Why sexual reproduction Can living creatures and hence biodiversity arise from non living dust How do embryos develop from a featureless mass into an orderly organised living body Does embryonic development dictate diversity and do species ever go extinct What is a soul Do animals have souls Do souls migrate between man and animal Does inheritance of acquired characters create biodiversity Does diversity
