A Really Short History of Nearly Everything Bill Bryson, 2008-10-28 Bill Bryson s own fascination with science began with a battered old school book he had when he was about ten or eleven years old It had an illustration that captivated him a diagram showing Earth s interior as it would look if you cut into it with a large knife and removed about a quarter of its bulk The idea of lots of startled cars and people falling off the edge of that sudden cliff and 4 000 miles is a pretty long way to fall was what grabbed him in the beginning but gradually his attention turned to what the picture was trying to teach him namely that Earth s interior is made up of several different layers of materials and at the very centre is a glowing sphere of iron and nickel as hot as the Sun s surface according to the caption And he very clearly remembers thinking How do they know that Bill s storytelling skill makes the How and just as importantly the Who of scientific discovery entertaining and accessible for all ages He covers the wonder and mystery of time and space the frequently bizarre and often obsessive scientists and the methods they used and the mind boggling fact that somehow the universe exists and against all odds life came to be on this wondrous planet we call home

In this book Bill Bryson explores the most intriguing and consequential questions that science seeks to answer and attempts to understand everything that has transpired from the Big Bang to the rise of civilization. To that end Bill Bryson apprenticed himself to a host of the world's most profound scientific minds living and dead. His challenge is to take subjects like geology, chemistry, paleontology, astronomy and particle physics and see if there isn't some way to render them comprehensible to people like himself made bored or scared stiff of science by school. His interest is not simply to discover what we know but to find out how we know it. How do we know what is in the center of the earth thousands of miles beneath the surface? How can we know the extent and the composition of the universe or what a black hole is? How can we know where the continents were 600 million years ago? How did anyone ever figure these things out? On his travels through space and time Bill Bryson encounters a splendid gallery of the most fascinating eccentric competitive and foolish personalities ever to ask a hard question. In their company he undertakes a sometimes profound sometimes funny and always supremely clear and entertaining adventure in the realms of human knowledge [A Short History of Nearly Everything](#) Bill Bryson, 2010-03-02

irrepressible curiosity irresistible wit stylish prose and masterful storytelling that made *A Short History of Nearly Everything* one of the most lauded books of the last decade and delivers one of the most entertaining and illuminating books ever written about the history of the way we live Bill Bryson was struck one day by the thought that we devote a lot more time to studying the battles and wars of history than to considering what history really consists of centuries of people quietly going about their daily business eating sleeping and merely endeavouring to get more comfortable And that most of the key discoveries for humankind can be found in the very fabric of the houses in which we live This inspired him to start a journey around his own house an old rectory in Norfolk wandering from room to room considering how the ordinary things in life came to be Along the way he did a prodigious amount of research on the history of anything and everything from architecture to electricity from food preservation to epidemics from the spice trade to the Eiffel Tower from crinolines to toilets and on the brilliant creative and often eccentric minds behind them And he discovered that although there may seem to be nothing as unremarkable as our domestic lives there is a huge amount of history interest and excitement and even a little danger lurking in the corners of every home *A Short History of Nearly Everything* Bill Bryson,2011
