Bankers Monthly ,1923 **Cognition** Frank George,2015-07-24 Originally published in 1962 the

problems of cognition dealt with in this book include learning perception thinking memory and linguistic behaviour It is not a textbook in the ordinary sense since it presents a particular approach to the subject through experimental psychology and also to some extent through philosophy cybernetics and logic A brief mention is made of ethological and physiological matters It argues that cognition is a stepping stone to integration with allied sciences A large scale study of the organism as a whole needs to be supplemented by other biological and logical studies but preparatory to this cognitive psychologists must try and discover more rigorous ways of presenting their theories and models since the mode of communicating an idea can never be wholly separated from that idea Furthermore cognition even at the organism as a whole level needs to broaden out and link up with social studies and studies in personality and individual difference This book pointed to a new direction that psychology should take without contributing greatly to existing knowledge in the obvious sense it suggests new methods and

new ways of regarding the existing knowledge at the time
