Koprowski,2013-03-09 All multicellular organisms may possess innate immunity mediated by defense mechanisms with which the organism is born In recent years much has been learned about the diversity of innate immune mechanisms A large array of naturally produced antimicrobial peptides has been de fined A variety of cell surface receptors that recognize common patterns displayed by infectious organisms have been identified along with the intracellular pathways that these receptors use to activate cellular defense functions Cell surface receptors on natural killer NK cells have been shown to sense microbial invasion in neighboring cells thereby setting into motion their elimination by cy tototoxic mechanisms Other receptors have been found to facilitate phagocytosis and intracellular killing of microbes by phagocytic cells These and other natural defense mechanisms have traditionally been viewed as the first line of body defense in vertebrate species that also possess the capacity for acquired or adaptive immunity Sharks and all of the other jawed vertebrates generate large repertoires of T and B lymphocyte clones that display different antigen specific receptors in the form ofT cell receptors TCR and immunoglobulins Ig that allow them to recognize and respond to antigens in collaboration with antigen present ing cells Memory T and B cells are then generated to allow faster and heightened cellular and humoral immune re sponses on secondary antigen encounter In recent years it has also become obvious that innate immune responses can directly influence adaptive immune responses in ways that will enhance body defense

Schoenberger, 2011-08-19 This volume presents a collection of reviews derived from work presented at the Aegean Conference 3rd Crossroads between innate and adaptive immunity which occurred during September 27 October 2 2009 at the Minoa Palace Conference Center in Chania Crete Greece This meeting was the third in a series and assembled a team of scientists working on mechanisms by which the innate immune system of the host senses pathogens the cellular and signaling networks that orchestrate the innate response and antigen presentation and adaptive immunity The various facets of the innate response including dendritic cells T cells B cells NK cells NK T cells and the complement cascade during the host response to pathogens and tumors is only now starting to be elucidated The respective fields that focus on these immune cells and molecules have tended to be relatively compartmentalized and yet emerging evidence points to the interconnectedness of these facets in coordinating the innate response and its subsequent impact on the adaptive response The goal of this conference was to initiate cross talk between these diverse immunological fields and promote and facilitate discussion on the interactions between the innate immune response and the adaptive immune response and ultimately facilitate collaboration between these areas of study Following on the footsteps of the outstanding
