*An Introduction to Assistive Technology* Suraj Singh Senjam, 2020-11-24. Globally more than one billion people suffer some form of disability and may require assistive devices for their functioning. Only 5 to 10% of them can access some level of rehabilitation services. Assistive technology is essential while providing rehabilitation services to people with disabilities or health impairment. The first edition of this book will help professionals working in habilitation and rehabilitation services and the chapters cover various aspects of assistive technologies. The first chapter shares existing evidence on assistive technologies, ATs that aid in rehabilitation intervention among children and adolescents with neurodevelopmental disorders. It provides the reader with a selective overview of the newest empirical contributions available in the literature on the use of AT-based interventions for enabling adaptive skills and reducing challenging behaviors in children with neurodevelopmental disabilities. The second chapter highlights the ViEW, a computer-based assistive technology for visual impairment. ViEW Vision Enhancement for the World is a portable device that uses a computer vision technique to extract textual information. The product can notify the nearest objects surrounding an individual with vision loss and read aloud with audio. The product will aid in teaching students at schools for the blind. The third and fourth chapters explain the existing classification for ATs for visual impairment and various devices that can be used to perform daily living tasks. This chapter is designed for people working in eye care services, teachers, trainers in schools for the blind, community-based visual rehabilitation workers or other interested persons. Chapter five presents advanced information and communication technologies (ICT) that may be used in bathroom safety without compromising personal privacy. Bathroom safety is extremely important, especially for older persons living independently at home. The chapter reviews trends in ICT development and presents state-of-the-art solutions for safe bathing, bath accident detection and prevention. Chapter six describes the applications of assistive software products in children with autism spectrum disorders where researchers deal with multiple factors to get closer to creating a model for children with autism for use in creating interactive apps. Chapter seven sheds light on the newest contributions in virtual reality (VR)-based intervention in neurodegenerative diseases: Alzheimer's and/or Parkinson's diseases, amyotrophic lateral sclerosis or multiple sclerosis. The outcomes in the majority of VR-based interventions were positive. The final chapter critically reviews the use of ATs and other relevant literature on the patient-centered design of ATs which will ultimately help
