Steps 2-6: Conditionally recommend the use of subcutaneous immunotherapy as an adjunct treatment to standard pharmacotherapy in individuals $\geq$ 5 years of age whose asthma is controlled at the initiation, build up, and maintenance phases of immunotherapy.▲						Consider Omalizumab**▲

### Assess Control

- First, check adherence, inhaler technique, environmental factors,▲, and comorbid conditions.
- Step up** if needed; reassess in 2-6 weeks.
- Step down** if possible (if asthma is well controlled for at least 3 consecutive months)

Consult with asthma specialist if Step 4 or higher is required. Consider consultation at Step 3.

Control assessment is a key element of asthma care. This involves both impairment and risk. Use of objective measures, self-reported control, and health care utilization are complementary and should be employed on an ongoing basis, depending on the individual's clinical situation.

▲ Cromolyn, Nedocromil, LTRAs including montelukast, and Theophylline were not considered in this update and/or have limited availability for use in the United States, and/or have an increased risk of adverse consequences and need for monitoring that make their use less desirable. The FDA issued a Boxed Warning for montelukast in March 2020.

\*\* Omalizumab is the only asthma biologic currently FDA-approved for this age range.

Asthma is a chronic inflammatory disease of the airways In the United States asthma affects more than 22 million persons It is one of the most common chronic diseases of childhood affecting more than 6 million children current asthma

prevalence National Health Interview Survey NHIS National Center for Health Statistics Centers for Disease Control and Prevention 2005 NHIS 2005 There have been important gains since the release of the first National Asthma Education and Prevention Program NAEPP clinical practice guidelines in 1991 For example the number of deaths due to asthma has

declined even in the face of an increasing prevalence of the disease NHIS 2005 fewer patients who have asthma report limitations to activities and an increasing proportion of people who have asthma receive formal patient education Department of Health and Human Services Healthy People 2010 midcourse review Hospitalization rates have remained relatively stable over the last decade with lower rates in some age groups but higher rates among young children 0 4 years of age There is

some indication that improved recognition of asthma among young children contributes to these rates However the burden of avoidable hospitalizations remains Collectively people who have asthma have more than 497 000 hospitalizations annually NHIS 2005 Furthermore ethnic and racial disparities in asthma burden persist with significant impact on African American and Puerto Rican populations The challenge remains to help all people who have asthma particularly those at high risk

receive quality asthma care Advances in science have led to an increased understanding of asthma and its mechanisms as well as improved treatment approaches To help health care professionals bridge the gap between current knowledge and

practice the NAEPP of the National Heart Lung and Blood Institute NHLBI has previously convened three Expert Panels to prepare guidelines for the diagnosis and management of asthma The NAEPP Coordinating Committee CC under the

leadership of Claude Lenfant M D Director of the NHLBI convened the first Expert Panel in 1989 The charge to that Panel

was to develop a report that would provide a general approach to diagnosing and managing asthma based on current science Published in 1991 the Expert Panel Report Guidelines for the Diagnosis and Management of Asthma EPR 1991 organized the recommendations for the treatment of asthma around four components of effective asthma management Use of objective measures of lung function to assess the severity of asthma and to monitor the course of therapy Environmental control measures to avoid or eliminate factors that precipitate asthma symptoms or exacerbations Patient education that fosters a partnership among the patient his or her family and clinicians Comprehensive pharmacologic therapy for long term management designed to reverse and prevent the airway inflammation characteristic of asthma as well as pharmacologic therapy to manage asthma exacerbations The NAEPP recognizes that the value of clinical practice guidelines lies in their presentation of the best and most current evidence available This report presents recommendations for the diagnosis and management of asthma that will help clinicians and patients make appropriate decisions about asthma care
