Macdonald Theory and Beyond Daniel Orr, Joshua Jeishing Wen, 2025-03-27 This volume contains the proceedings of the AMS Special Session on Macdonald Theory and Beyond Combinatorics Geometry and Integrable Systems held virtually on March 19 20 2022 The articles in this volume represent a number of recent developments in the theory of Macdonald polynomials while highlighting some of its many connections to other areas of mathematics An important common thread throughout the volume is the role of combinatorial formulas for Macdonald polynomials themselves as well as operations on them arising from rich additional structures The articles of Haglund Mandelshtam and Romero concern the type A Macdonald polynomials which remain a major focus of the subject due to the depth of their combinatorial theory and the power of their specific applications For arbitrary type Macdonald polynomials a new combinatorial formula with pseudo crystal structure is presented in the article of Lenart Naito Nomoto and Sagaki Finally the articles of Saied and Wen take up two important new directions in the subject the SSV polynomials arising from the study of special functions on metaplectic groups and the wreath Macdonald polynomials associated with certain symplectic resolutions

A Time Series Approach to Option Pricing Christophe Chorro, Dominique Guégan, Florian Ielpo, 2014-12-04 The current world financial scene indicates at an intertwined and interdependent relationship between financial market activity and economic health This book explains how the economic messages delivered by the dynamic evolution of financial asset returns are strongly related to option prices The Black Scholes framework is introduced and by underlining its shortcomings an alternative approach is presented that has emerged over the past ten years of academic research an approach that is much more grounded on a realistic statistical analysis of data rather than on ad hoc tractable continuous time option pricing models The reader then learns what it takes to understand and implement these option pricing models based on time series analysis in a self contained way The discussion covers modeling choices available to the quantitative analyst as well as the tools to decide upon a particular model based on the historical datasets of financial returns The reader is then guided into numerical deduction of option prices from these models and illustrations with real examples are used to reflect the accuracy of the approach using datasets of options on equity indices
