1) What happens to the blood when it is pumped into the thin walled blood vessels of the alveoli of the lungs?

- a) platelets are exchanged for plasma
- b) carbon dioxide is replaced with oxygen
- c) wastes are filtered out of the blood
- d) carbon dioxide is converted to carbonic acid

Answer: B because CO_2 collects in the blood as blood returns to the heart and lungs. In the lungs, the carbon dioxide leaves the body. It is replaced by oxygen when the lungs inhale fresh air.

2) What is the difference between open and closed circulatory system?

Answer: Closed circulatory is when the blood never leaves the network of blood vessels (explain what they are) when the flow is confined to the vessels. (What phyla?) The open circulatory system is an arrangement of internal transport present in many animals such as mollusks and arthropods, in which fluid in a cavity called the hemocoel bathes the organs directly with oxygen and nutrients and there is no distinction between blood and interstitial fluid.

1) What is a heart attack?

- A) The stop of blood pumping through the heart due to the lack of oxygen.
- B) The death of cardiac tissue due to coronary blockage.
- C) The excess pressure around the heart due to the excessive body fat.
- D) arrhythmic heart beat

(B)

2) What are the benefits of negative pressure breathing as found in mammals?

(With the ability to pull air into the lungs, mammals are better suited to hold the air for a longer period of time. This is especially beneficial when mammals are in habitats where the air is scarce/limited. EX: dolphins in water; humans in a smoked room.)

What are the three types of T cells?

- A. T cytotoxic cells, T helper cells, memory T cells
- B. T cytotoxic cells, T helper cells, T receptor
- C. T helper cells, T memory cells, T signal cells
- D. T memory cells, T helper cells, T pain cells

Correct answer is A. T cytotoxic cells destroy cells infected by intracellular pathogens and cancer cells. The T helper cells are present in the humoral and cell-mediate immunity. The memory T cells fight against virus or other microbial molecules.
