Modeling and Evaluating Denial of Service Attacks for Wireless and Mobile Applications Zhou Lu,Wenye Wang,Cliff Wang,2015-11-05 This SpringerBrief covers modeling and analysis of Denial of Service attacks in emerging wireless and

mobile applications. It uses an application specific methodology to model and evaluate denial of service attacks. Three emerging applications are explored: multi modal CSMA CA networks, time critical networks for the smart grid and smart phone applications. The authors define a new performance metric to quantify the benefits of backoff misbehavior and show the impacts of a wide range of backoff mishandling nodes on the network performance and propose a scheme to minimize the delay of time critical message delivery under jamming attacks in smart grid applications. An investigation on the resilience of mobile services against malware attacks is included to advance understanding of network vulnerabilities associated with emerging wireless networks and offers instrumental guidance into the security design for future wireless and mobile applications. This book is appropriate for students, faculty, engineers and experts in the technical area of wireless communication, mobile networks and cyber security.

Critical Infrastructure Protection: Advanced Technologies for Crisis Prevention and Response Tünde Anna Kovács, Igor Fürstner, 2025-06-13

This book presents the latest research findings from experts in critical infrastructure protection and management. It explores various aspects of both cyber and physical attack scenarios, focusing on crisis management and response strategies. A significant portion of the work addresses how different critical infrastructure sectors can withstand and recover from attacks with an emphasis on practical solutions and real world applications. Several chapters also delve into the human element of crisis management, highlighting the psychological and organizational challenges faced during emergencies. The book demonstrates how human decision making behaviour and coordination play pivotal roles in the effectiveness of response efforts. One of the emerging topics in critical infrastructure protection discussed in the book is using Unmanned Aerial Vehicles (UAVs) in firefighting and other accident related crisis situations. This innovative technology is shown to enhance emergency response capabilities, offering new ways to monitor, assess and manage crises from a distance. Additionally, the research includes detailed analyses of ballistic and blast effects, offering insights into how these physical threats can impact infrastructure and how to mitigate their effects. The book combines cutting edge research with practical insights, providing a comprehensive overview of the current trends and challenges in protecting critical infrastructures from a wide range of threats. This book also addresses the evolving role of humans in modern warfare, particularly in the context of increasing reliance on artificial intelligence. As AI technologies reshape military strategies, they emphasize the need to balance automation with human oversight, ensuring that human security remains central to decision making processes in complex and high stakes environments.
