**A Radiologist's Path** Jason Shames, Lisa Zorn, Kahyun Yoon-Flannery, 2025-06-10 Choosing the right medical specialty can be daunting. Despite the long and demanding path to becoming a physician, many trainees receive limited exposure to the wide range of career options available. Radiology, in particular, is often overlooked yet it plays a crucial role in nearly every field of medicine. This comprehensive guide is designed to shed light for medical students, residents, fellows, and attending physicians as to why radiology is a specialty very few leave once they've entered and many pivot into after starting down alternative career paths. It covers everything from an overview of residency programs and subspecialties to practical advice on job searches, essential career skills, professional interactions, long-term planning, and work-life balance. Whether you're navigating the match process, preparing for interviews, negotiating a salary, or preventing burnout, radiologists from across the country share invaluable insights and personal experiences to help you build a fulfilling and rewarding career in this dynamic field.

**The Essential Physics of Medical Imaging** Jerrold T. Bushberg, J. Anthony Seibert, Edwin Marion Leidholdt, John M. Boone, 2022-09-23 The basic science important to nuclear imaging, including the nature and production of radioactivity, internal dosimetry, and radiation detection and measurement, are presented clearly and concisely. Current concepts in the fields of radiation biology and radiation protection relevant to medical imaging and a number of helpful appendices complete this comprehensive textbook. The text is enhanced by numerous full-color charts, tables, images, and superb illustrations that reinforce central concepts. The theoretical and practical knowledge gained by students on previous courses or in clinical settings is reinforced by means of almost 1200 questions and accompanying detailed analytical answers. In order to cater for the needs of all students, the questions are arranged according to three levels of difficulty. The level I questions are mainly intended for those hoping to pass the Medical Dosimetrist Certification Board (MDCB) exam but will also be beneficial for Medical Physics candidates taking written exams and for Radiation Oncology residents. The level II questions are in general clinically related and will be relevant for any student, while the level III questions are advanced and are especially suitable for American Board of Radiology candidates or those taking equivalent exams elsewhere in the world. The study guide is broken down into different subject areas with provision of multiple questions and answers on each subject. In addition, the mathematical and physics questions include brief explanations of how the student can solve each problem. At the end of the guide, three practice tests are included with the same number of questions as are found in the MDCB exam. These tests will

help students to test their knowledge and improve their test taking speed
