why and how books matter in the 21st century Digital and audio platforms are commonplace and other fields of art beyond literature have increasingly embraced books and publication as their medium of choice Nevertheless the manifold book object persists and continues to inspire various types of experimentation This volume sets forth an unprecedented approach where literary and media theory are entangled with design practitioners artistic research and process descriptions By probing the paradigm of the codex this collection of essays focuses on historical and contemporary experimentation that has challenged what books are and could be from the perspectives of materiality mediation and visual and typographic design Investigations into less studied areas and cases of performativity demonstrate what experimental books do by interacting with their systemic and cultural environments The volume offers a multifaceted and multidisciplinary view of the book object the book design and publishing processes and their significance in the digital age *Alan Moore on His Work and Career* Bill Baker,2007-07-15 Interview with graphic novelist Alan Moore *Comics and the Senses* Ian Hague,2014-01-10 Attempts to define what comics are and explain how they work have not always been successful because they are premised upon the idea that comic strips comic books and graphic novels are inherently and almost exclusively visual This book challenges that premise and asserts that comics is not just a visual medium The book outlines the multisensory aspects of comics the visual audible tactile olfactory and gustatory elements of the medium It rejects a synaesthetic approach by which all the senses are engaged through visual stimuli and instead argues for a truly multisensory model by which the direct stimulation of the reader's physical senses can be understood A wide range of examples demonstrates how multisensory communication systems work in both commercial and more experimental contexts The book concludes with a case study that looks at the works of Alan Moore and indicates areas of interest that multisensory analysis can draw out but which are overlooked by more conventional approaches **Unmaking Merlin** Elliot Murphy,2014-11-28 A unique exploration of how anarchist philosophy and practice has inspired some of the English language's most revered and reviled authors Re-Thinking Agency Joanna Godlewicz-Adamiec,Paweł Piszczatowski,2024-10-07 The book explores the multi faceted nature of contemporary reflections on agency focusing on various discursive practices that shape the posthumanist approach to the relationship between the human and non human world from a planetary perspective The chapters delve into critical human animal studies examine new non anthropocentric identity constructs and offer analyses that reinterpret meanings through semiotic inversions and challenge static cultural patterns The book concludes with discussions on decolonization practices that aim to liberate agency from oppressive systems particularly those dominated by imperial phallogocentrism **The Statistics of Natural Selection on Animal Populations** Brian F. Manly,2013-03-09 In the concluding chapter of his famous book on the theory of evolution by natural selection Charles Darwin 1859 remarked that When the views entertained in this volume on the origin of species or when analogous views are generally admitted we can dimly foresee that there will be a considerable revolution in natural history This proved of course to be completely correct At present there is a great

divergence of opinion about the general importance of natural selection in the evolutionary process Nevertheless biologists are on the whole united in their acceptance of the potential power of selection in changing populations Given this situation it is not surprising to find that many attempts to detect the effects of natural selection have been made since the time of Darwin This area of study has been called ecological genetics It involves the collection of data of various kinds and in many cases the development of special methods for analysing these data This book is a summary of methods for data analysis concentrating on those that are applicable to animal populations particularly wild populations **Hélène Cixous** Verena Andermatt Conley,1992 Locates the writings of Helene Cixous in a movement that runs between politics and poetry blending interpretation with feminine aspects of creation It also sets her work in a historical context from looking at post World War II leftist views to her recent work on apartheid and more *The odes, Carmen saeculare and Epodes* Horace,1904 *Bulletin of the Brooklyn Entomological Society* Brooklyn Entomological Society,1879 **Insect-plant Interactions** Elizabeth A.
