In the three decades following World War II the French government engaged in one of the twentieth century's greatest social and architectural experiments transforming a mostly rural country into a modernized urban nation. Through the state sanctioned construction of mass housing and development of towns on the outskirts of existing cities a new world materialized where sixty years ago little more than cabbage and cottages existed. Known as the banlieue the suburban landscapes that make up much of contemporary France are near opposites of the historic cities they surround. Although these postwar environments of towers slabs and megastructures are often seen as a single utopian blueprint gone awry, Kenny Cupers demonstrates that their construction was instead driven by the intense aspirations and anxieties of a broad range of people. Narrating the complex interactions between architects planners policy makers inhabitants and social scientists he shows how postwar dwelling was caught between the purview of the welfare state and the rise of mass consumerism. The Social Project unearths three decades of architectural and social experiments centered on the dwelling environment as it became an object of modernization an everyday site of citizen participation and a domain of social scientific expertise. Beyond state intervention it was this new regime of knowledge production that made postwar modernism mainstream. The first comprehensive history of these wide ranging urban projects this book reveals how housing in postwar France shaped both contemporary urbanity and modern architecture.
