These features are followed by a set of independent practice problems. Numerous worked examples in the text now include Analysis and Synthesis sections which allow engineers to explore concepts in greater depth and discuss outside relevance.

National Bureau of Standards, 1973     *Optical Radiometry and Satellite Validation* Agnieszka Bialek, David Doxaran, Vittorio Ernesto Brando, Clemence Goyens, Kevin Ruddick, Ana Ines Dogliotti, 2025-08-26 Strict quality control is essential to ensure that the satellite data products routinely used for environmental monitoring of water and land surfaces are fit for purpose. A crucial step in this process is the validation of the water and land surface reflectances from which the final end user products are derived. The topic of radiometric validation is growing rapidly in importance both because of the advent of operational satellite missions for routine environmental monitoring and because of the rapid expansion in the number of satellite missions including CubeSat constellations with limited cal val resources. This enhanced need for radiometric validation data covering a wide VIS NIR SWIR range e.g. 380-2400nm preferably with a hyperspectral resolution must be met by new techniques and hardware particularly ground based automated radiometry.     *Journal of Dynamic Systems, Measurement, and Control*, 2007
