*Personality Tests and Assessments (Psychology Revivals)* Philip E. Vernon, 2014-01-27 Originally published in 1953 this book provided the first comprehensive account of methods of personality assessment by a British author. It starts with a short survey of personality theory pointing out the difficulties in any method of testing or assessment. Next it describes the weaknesses of the common interview method. Throughout the emphasis is on methods which are usable in educational or vocational guidance and selection not on methods which are mainly of scientific interest. Thereafter it takes up each main type of technique tests based on physique or psychological measures on expressive movement such as gestures and handwriting tests of behaviour including War Office Selection Board house party methods ratings and rating scales questionnaires and so called projective techniques. The evidence for or against each test or method is surveyed and numerous references provided for relevant literature. Illustrative excerpts are given of many of the more promising tests and some pictorial illustrations. British work in this field at the time is covered completely and an attempt is made to provide a fair summary of the main contributions of American and other psychologists of the day

**(Psychology Revivals)** Philip E. Vernon, 2014-01-27 Originally published in 1964 the aim of this book was to analyse the psychological processes involved in understanding personality and to consider how the psychologist could help in making more accurate assessments. Professor Vernon discusses in detail the scientific status of psychoanalytic and other depth theories of motivation the value of different types of psychotherapeutic treatment and counselling the influence of upbringing on the development of personality and the effectiveness of projective techniques. Paul Kline, 2015-06-11 Originally published in 1983 and written in the tradition of the British School of Psychology Spearman Burt Eysenck Cattell this book from a well known author was exceptional at the time in its attempt to wed quantification and

psychological theory in the study of personality The student is presented with a discussion of the different methods of measuring personality and the various findings which have been made The results are then discussed in the light of psychological theories of personality and here the author stresses the need for a theory with a properly quantified bias However the emphasis on findings from measurement and not the measurement itself makes the book psychological truly about personality and not simply another text on psychological measurement Dimensional Assessment of Personality Disorders in Young People: A Closer Look on Personality Functioning in Younger Ages, Different cultures, and Various Clinical Settings Klaus Schmeck,2022-12-27 **A Handbook of Test Construction** Paul Kline,2015-06-03 Psychological tests provide reliable and objective standards by which individuals can be evaluated in education and employment Therefore accurate judgements must depend on the reliability and quality of the tests themselves Originally published in 1986 this handbook by an internationally acknowledged expert provided an introductory and comprehensive treatment of the business of constructing good tests Paul Kline shows how to construct a test and then to check that it is working well Covering most kinds of tests including computer presented tests of the time Rasch scaling and tailored testing this title offers a clear introduction to this complex field a glossary of specialist terms an explanation of the objective of reliability step by step guidance through the statistical procedures a description of the techniques used in constructing and standardizing tests guidelines with examples for writing the test items computer programs for many of the techniques Although the computer testing will inevitably have moved on students on courses in occupational educational and clinical psychology as well as in psychological testing itself would still find this a valuable source of information guidance and clear explanation

situation in the study of personality but with a focus on the acquired meaning of stimuli and on the situation as perceived viewing the individual as a cognitive affective being who construes interprets and transforms the stimulus in a dynamic reciprocal interaction with the social world He focused on the idiographic analysis of personality that had originally motivated the field and the complexity discriminative facility and uniqueness of the individual and sought to connect the expressions of personality to the individual s behavior that is to what people do and not just what they say Even the intrinsically contextualized if then expressions of the personality system its essential behavioral signatures were foreshadowed in this book that fired the opening salvo in a search for a truly dynamic personality psychology
