Sustainable Green Chemical Processes and their Allied Applications Inamuddin, Abdullah Asiri, 2020-05-30 Urbanization industrialization and unethical agricultural practices have considerably negative effects on the environment flora fauna and the health and safety of humanity Over the last decade green chemistry research has focused on discovering and utilizing safer more environmentally friendly processes to synthesize products like organic compounds inorganic compounds medicines proteins enzymes and food supplements These green processes exist in other interdisciplinary fields of science and technology like chemistry physics biology and biotechnology Still the majority of processes in these fields use and generate toxic raw materials resulting in techniques and byproducts which damage the environment Green chemistry principles alternatively consider preventing waste generation altogether the atom economy using less toxic raw materials and solvents and opting for reducing environmentally damaging byproducts through energy efficiency Green chemistry is therefore the most important field relating to the sustainable development of resources without harmfully impacting the environment This book provides in depth research on the use of green chemistry principles for a number of applications

Membrane-based Hybrid Processes for Wastewater Treatment Maulin P. Shah, Susana Rodriguez-Couto, 2021-05-27 Membrane Based Hybrid Processes for Wastewater Treatment analyzes and discusses the

potential of membrane based hybrid processes for the treatment of complex industrial wastewater the recovery of valuable compounds and water reutilization In addition recent and future trends in membrane technology are highlighted Industrial wastewater contains a large variety of compounds such as heavy metals salts and nutrients which makes its treatment challenging Thus the use of conventional water treatment methods is not always effective Membrane based hybrid processes have emerged as a promising technology to treat complex industrial wastewater Discusses the properties mechanisms advantages limitations and promising solutions of different types of membrane technologies Addresses the optimization of process parameters Describes the performance of different membranes Presents the potential of Nanotechnology to improve the treatment efficiency of wastewater treatment plants WWTPs Covers the application of membrane and membrane based hybrid treatment technologies for wastewater treatment Includes forward osmosis electrodialysis and diffusion dialysis Considers hybrid membrane systems expanded to cover zero liquid discharge salt recovery and removal of trace contaminants
