Section: The Geosphere

Read the passage below and answer the questions that follow.

The Earth can be divided into five layers based on the physical properties of each layer. Earth's outer layer is the **lithosphere**. It is a cool, rigid layer that is 15 km to 300 km thick and includes the crust and uppermost part of the mantle. It is divided into huge pieces called *tectonic plates*. The **asthenosphere** is the layer beneath the lithosphere. The asthenosphere is a plastic, solid layer of the mantle made of rock that flows very slowly and allows tectonic plates to move on top of it. Beneath the asthenosphere is the mesosphere, the lower part of the mantle.

The Earth's outer core is a dense liquid layer. At the center of the Earth is the dense, solid inner core, which is made up mostly of the metals iron and nickel. The temperature of the inner core is estimated to be between 4,000°C to 5,000°C. Even though the inner core is so hot, it is solid because it is under enormous pressure. Earth's outer and inner core together make up about one-third of Earth's mass.
