

Lanczos Iteration - Theory

The matrices Q_k generated by the Arnoldi iteration are reduced QR-factors of the Krylov matrix:

$$K_k = Q_k R_k$$

The tridiagonal matrices T_k are the corresponding projections

$$T_k = Q_k^* A Q_k$$

And the successive iterates are related by the formula

$$A Q_k = Q_{k+1} \begin{bmatrix} T_k \\ \beta_k e_k^* \end{bmatrix} = Q_k T_k + \beta_k q_{k+1} e_k^*$$

Iteration Theory and its Functional Equations Roman Liedl, Ludwig Reich, György Targonski, 2006-11-14 *Iteration Theory - Proceedings Of The European Conference* W Forg-rob, Norbert Netzer, Christian Mira, György Targonski, Detlef Gronau, 1996-07-03 Iteration theory has its roots in the operation of substituting functions into itself This has led to questions like that of the behaviour of functions by repeating this substitution and when the number of iterations tends to infinity The terms orbit and chaos appropriately describe this behaviour Dynamical systems and the theory of functional equations play important roles in this field Topics in Iteration Theory György I. Targonski, 1981 **Iteration Theories** Stephen L. Bloom, Zoltan Esik, 2012-12-06 This monograph contains the results of our joint research over the last ten years on the logic of the fixed point operation The intended audience consists of graduate students and research scientists interested in mathematical treatments of semantics We assume the reader has a good mathematical background although we provide some preliminary facts in Chapter 1 Written both for graduate students and research scientists in theoretical computer science and mathematics the book provides a detailed investigation of the properties of the fixed point or iteration operation Iteration plays a fundamental role in the theory of computation for example in the theory of automata in formal language theory in the study of formal power series in the semantics of flowchart algorithms and programming languages and in circular data type definitions It is shown that in all structures that have been used as semantical models the equational properties of the fixed point operation are captured by the axioms describing iteration theories These structures include ordered algebras partial functions relations finitary and in finitary regular languages trees synchronization trees 2 categories and others *Iteration Theory and Its Functional Equations* Roman Liedl, Ludwig Reich, György Targonski, 2014-01-15 *Iteration Theory (ECIT '06)* Gian Luigi Forti, 2007 *Index Theory for Symplectic Paths with Applications* Yiming Long, 2012-12-06 This book is based upon my monograph *Index Theory for Hamiltonian Systems with Applications* published in 1993 in Chinese and my notes for lectures and courses given at Nankai University Brigham Young University ICTP Trieste and the Institute of Mathematics of Academia Sinica during the last ten years The aim of this book is twofold 1 to give an introduction to the index theory for symplectic matrix paths and its iteration theory which form a basis for the Morse theoretical study on Hamiltonian systems and to give applications of this theory to periodic boundary value problems of nonlinear Hamiltonian systems Here the iteration theory means the index theory of iterations of periodic solutions and symplectic matrix paths 2 to serve as a reference book on these topics There are many different ways to introduce the index theory for symplectic paths in order to establish Morse type index theory of Hamiltonian systems In this book I have chosen a relatively elementary way i e the homotopy classification method of symplectic matrix paths It depends only on linear algebra point set topology and certain basic parts of linear functional analysis I have tried to make this part of the book self contained and at the same time include all of the major results on these topics so that researchers and students interested in them can

read it without substantial difficulties and can learn the main results in this area for their possible applications

The Theory and Applications of Iteration Methods Ioannis K. Argyros, Ferenc Szidarovszky, 2018-05-04 The Theory and Applications of Iteration Methods focuses on an abstract iteration scheme that consists of the recursive application of a point to set mapping Each chapter presents new theoretical results and important applications in engineering dynamic economic systems and input output systems At the end of each chapter case studies and numerical examples are presented from different fields of engineering and economics Following an outline of general iteration schemes the authors extend the discrete time scale Liapunov theory to time dependent higher order nonlinear difference equations The monotone convergence to the solution is examined in and comparison theorems are proven Results generalize well known classical theorems such as the contraction mapping principle the lemma of Kantorovich the famous Gronwall lemma and the stability theorem of Uzawa The book explores conditions for the convergence of special single and two step methods such as Newton s method modified Newton s method and Newton like methods generated by point to point mappings in a Banach space setting Conditions are examined for monotone convergence of Newton s methods and their variants Students and professionals in engineering the physical sciences mathematics and economics will benefit from the book s detailed examples step by step explanations and effective organization
