Ecological Systems of the Geobiosphere

Heinrich Walter, Siegm. W. Breckle, 1989-08-17 By the end of the last century the only region in all of Europe where the natural vegetation remained untouched over large expanses was Eastern Europe. Information on the vegetation of this region however remained mostly unavailable to western scientists although the ecological approach to botanical research originated in Eastern Europe. Heinrich Walter was born in Russia, studied Natural Sciences with emphasis on botany in Odessa and is familiar with all relevant Russian literature on ecology. This volume thus offers scientists worldwide a unique and comprehensive survey of all relevant research including the mostly unknown literature published in Russian. *Ecological*

Ecological Systems of the Geobiosphere

Heinrich Walter, Siegm. W. Breckle, 1986-11-01 In Volume 1 of this four volume series ecological problems of a general nature were discussed from a global point of view. Familiarity with this is essential for a full understanding of the more specialized treatment in this and subsequent volumes for no similar approach is to be found in other ecological handbooks for beginners. This present volume deals in detail with the special ecological relationships of the tropical and subtropical zoniomes I to III. Most ecologists proceed from the basis of their experience in the temperate zones of the northern hemisphere. As a result many ecological writings show a certain one-sidedness and there is a danger that generalizations made will not be broadly applicable. To avoid this particular emphasis is laid in this volume on the special ecological features and the characteristics of the tropical and subtropical regions. More specifically we deal not only with the relationship of the euclimate to zonal soils and zonal vegetation but also pay attention to azonal conditions shown in pedoniomes and in the altitudinal belts of mountains the oroniomes. In this and the subsequent volumes the same simple scheme is followed in treating each zoniome: 1 climate 2 soils 3 producers 4 consumers 5 decomposers 6 ecosystems 7 subdivision into biomes 8 oroniomes 9 pedoniomes and 10 zonoecotones. Where it has appeared expedient however we have occasionally deviated from this scheme see Deserts D F G and H. **Vegetation of the Earth and Ecological Systems of the Geo-biosphere**

Heinrich Walter, 2012-12-06 Phytomass and Primary Production of the Various Vegetational Zones and of the Entire

Biosphere. The biosphere is that thin layer at the earth's surface in which living organisms exist and biological cycling takes place. It includes the upper horizons of the soil in which plants root, the atmosphere near the ground insofar as organisms penetrate this space and all the surface waters. More than 99% of the earth's biomass is phytomass to which we shall limit our discussion. Amounts of phytomass are distinctly related to vegetational zones. Because accurate determination of phytomass and primary production is difficult only gross estimates have been available until recently. However in 1970 Bazilevich et al. published in Russian more accurate calculations based on the rapidly accumulating literature for the various thermal zones and bioclimatic regions of the earth. These authors calculated mean phytomass and mean annual primary production for the various regions as dry mass in tons per hectare. On the basis of measurements of the areas covered by the

individual regions excluding rivers lakes glaciers and permanent snow total phytomass and total annual primary production for the various regions were obtained see table The sum of these figures is the phytomass and annual production of the land surface of the earth In addition the table gives corresponding data for the waters of the earth The values involved are potential i e they are based on natural vegetation uninfluenced by man *Ecological Systems of the Geobiosphere:*
