

Action Research Proposal: Mathematics Problem-Solving Skill and Reading Comprehension

It is common but flawed that problem solving is an important part of mathematics education. Mathematics, in general, is an important subject because of the practical side of it as people use this constantly day in everyday life. However, before it becomes even more useful, which is problem, but there are persons that need more comprehension, as well as analysis and comprehension skills.

The Problem

Problem solving in mathematics and reading comprehension go hand in hand. Many math problems involve the ability to apply their math skills to the real world, reading and comparing it to a real-world problem.

An example of a problem-solving skill is a math problem. For first grade, it is a problem-solving skill, which is a skill that is used to solve a problem and analyzing math word problems.

Specifically, in my first grade class, only 12 out of 20 students could solve a problem-solving skill in mathematics. This has been a problem for the students to understand the problem. As a teacher, I am aware that it is not the students who are struggling with the problem, they are trying to solve. This is a problem-solving skill, and the students are not able to solve the problem. This is a problem-solving skill, and the students are not able to solve the problem. This is a problem-solving skill, and the students are not able to solve the problem.

Clearly, the lack of understanding of the students of the math problems is a problem, and the students are not able to solve the problem. This is a problem-solving skill, and the students are not able to solve the problem. This is a problem-solving skill, and the students are not able to solve the problem.

The Causes

1. Lack of understanding of mathematics.
2. Lack of understanding of reading comprehension.

The Solutions

Strategy

1. Develop a strategy before the beginning of the math class.
