

## Advanced Microeconomic Theory

SECOND EDITION

Geoffrey A. Jehle • Philip J. Reny

Advanced Microeconomic Theory delivers rigorous coverage of modern microeconomic theory from consumer and producer theories, to partial and general equilibrium, to games and information and does it all in a refreshing, easy-to-read style. Topics, introduced patiently, are developed in depth, helping readers to master sophisticated theory as they gain insight into how it can be applied.

### The Second Edition features:

**New Chapter on Auctions.** One of today's most active frontiers in theoretical research, auctions are treated from the perspective of mechanism design in this entirely new chapter. Challenging new exercises help students refine—and extend—their own command of this fast-growing field.

**New Mathematical Appendix.** Readers looking for instruction, review, or a handy reference to all essential mathematics will find what they need in these two full chapters, revised and newly reorganized as a comprehensive Mathematical Appendix.

**Thoroughly Updated Text.** Every chapter of this Second Edition has been carefully revised and thoroughly updated.

**Geoffrey A. Jehle** is Professor of Economics at Vassar College.

**Philip J. Reny** is Professor of Economics and of Social Sciences in the College, University of Chicago.

"[This text] includes all the pertinent topics of major importance. . . . [T]he exposition is easily followed and just enough is left to the reader to stimulate initiative without causing frustration. The book should lead beginning graduates and advanced undergraduates through the thicket of beginning formal analysis, offering both insight and the opportunity to acquire mastery of the requisite tools."

*New Insights into the Theory of Giffen Goods* Wim Heijman, Pierre Mouche, 2011-10-12 One might expect that after their identification in the 19th century all aspects of Giffen goods would have been studied by now This appears not to be the case This book contains the latest insights into the theory of Giffen goods In the past surprisingly few goods could be categorized as Giffen This may be because of a lack of understanding of the character of these goods Therefore the theories explained in this book may also produce a solid basis for further empirical research in the field Experts throughout the world have contributed to this book which predominantly pursues a mathematically rigorous approach It may be used by researchers in the field of fundamental economics and in graduate level courses in advanced microeconomics

**Network Economics and the Allocation of Savings** Philipp Servatius, 2011-10-20 This book provides a game theoretic model of interaction among VoIP telecommunications providers regarding their willingness to enter peering agreements with one another The author shows that the incentive to peer is generally based on savings from otherwise payable long distance fees At the same time termination fees can have a countering and dominant effect resulting in an environment in which VoIP firms decide against peering Various scenarios of peering and rules for allocation of the savings are considered The first part covers the relevant aspects of game theory and network theory trying to give an overview of the concepts required in the subsequent application The second part of the book introduces first a model of how the savings from peering can be calculated and then turns to the actual formation of peering relationships between VoIP firms The conditions under which firms are willing to peer are then described considering the possible influence of a regulatory body
