**Advanced Wireless Networks** Savo G. Glisic, 2016-08-08 The third edition of this popular reference covers enabling technologies for building up 5G wireless networks Due to extensive research and complexity of the incoming solutions for the next generation of wireless networks it is anticipated that the industry will select a subset of these results and leave some advanced technologies to be implemented later This new edition presents a carefully chosen combination of the candidate network architectures and the required tools for their analysis Due to the complexity of the technology the discussion on 5G will be extensive and it will be difficult to reach consensus on the new global standard The discussion will have to include the vendors operators regulators as well as the research and academic community in the field Having a comprehensive book will help many participants to join actively the discussion and make meaningful contribution to shaping the new standard

**Signal**, 2000      **Semantics in Adaptive and Personalized Services** Manolis Wallace, Ioannis E.

Anagnostopoulos, Phivos Mylonas, Mária Bieliková, 2010-03-10 Semantics in Adaptive and Personalised Services initially strikes one as a specific and perhaps narrow domain Yet a closer examination of the term reveals much more On one hand there is the issue of semantics Nowadays this most often refers to the use of OWL RDF or some other XML based ontology description language in order to represent the entities of problem Still semantics may also very well refer to the consideration of the meanings and concepts rather than arithmetic measures regardless of the representation used On the other hand there is the issue of adaptation i e automated re configuration based on some context This could be the network and device context the application context or the user context we refer to the latter case as personalization From a different perspective there is the issue of the point of view from which to examine the topic There is the point of view of tools referring to the algorithms and software tools one can use the point of view of the methods referring to the abstract methodologies and best practices one can follow as well as the point of view of applications referring to successful and pioneering case studies that lead the way in research and innovation Or at least so we thought Based on the above reasoning the editors identified key researchers and practitioners in each of the aforementioned categories and invited them to contribute a corresponding work to this book However as the authors contributions started to arrive the editors also started to realize that although these categories participate in each chapter to different degrees none of them can ever be totally obsolete from them Moreover it seems that theory and methods are inherent in the development of tools and applications and inversely the application is also inherent in the motivation and presentation of tools and methods
