Troup,M. G. Ya?argil,2012-12-06 There are two important reasons for commencing this new series of publications entitled Advances and Technical Standards in Neurosurgery 1 the lack of any organized common European postgraduate training system for young neurosurgeons and 2 the language barriers which impede the exchange of neuro surgical findings in Europe more than in other parts of the world The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore the Editors have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions will be written by specialists in the given fields and will constitute the first part of each volume **Advances and Technical Standards in Neurosurgery**

Concezio Di Rocco,2025-07-03 This volume maintains the structure of previous ATSN series volumes offering a balanced distribution of chapters that cover recent advances in neurosurgery and reviews of major neurosurgical conditions Key sections of the volume provide a detailed review of tumors including those of the optic pathways hypothalamus and pituitary adenomas These sections highlight the renewed interest in surgical options for these tumors emphasizing multi specialist treatment approaches The initial chapters focus on the development of instruments and techniques that facilitate minimally invasive approaches to various regions of the brain and crano vertebral junction The volume also includes a chapter on colloid cysts of the third ventricle which complements the discussion of surgical approaches for anterior skull base and frontal basal region pathologies Other chapters are dedicated to cerebral arterial aneurysms and arteriovenous malformations exploring the advantages of combined therapeutic strategies for safer and more effective management of these complex lesions The final chapters investigate the benefits of complete excision of spinal lipomas versus partial resections and the more extensive excision of brain tissue harboring a glioblastoma lobectomy versus simple resection of the tumor and its infiltration into the surrounding brain parenchyma Overall the book is primarily aimed at mature and experienced neurosurgeons but it is also beneficial for younger practitioners It emphasizes a continuous reconsideration of well known diseases in terms of new approaches that combine increased efficacy with decreased risk for the patient
