Advances in Mapping from Remote Sensor Imagery Xiaojun Yang, Jonathan Li, 2017-10-27 Advances in Mapping from Remote Sensor Imagery Techniques and Applications reviews some of the latest developments in remote sensing and information extraction techniques applicable to topographic and thematic mapping. Providing an interdisciplinary perspective, leading experts from around the world have contributed chapters examining state of the art techniques as well as widely used methods. The book covers a broad range of topics including photogrammetric mapping and LiDAR remote sensing for generating high quality topographic products, global digital elevation models, current methods for shoreline mapping, and the identification and classification of residential buildings. Contributors also showcase cutting edge developments for environmental and ecological mapping including assessment of urbanization patterns, mapping vegetation cover, monitoring invasive species, and mapping marine oil spills, crucial for monitoring this significant environmental hazard. The authors exemplify the information presented in this text with case studies from around the world. Examples include Envisat ERS 2 images used to generate digital elevation models over northern Alaska, In situ radiometric observations, and MERIS images employed to retrieve chlorophyll a concentration in inland waters in Australia. ERS 1/2 SAR images utilized to map spatiotemporal deformation in the southwestern United States. Aerospace sensors and related information extraction techniques that support various mapping applications have recently garnered more attention due to the advances in remote sensing theories and technologies. This book brings together top researchers in the field, providing a state of the art review of some of the latest advancements in remote sensing and mapping technologies.

Engineering Geology for Society and Territory - Volume 5 Giorgio Lollino, Andrea Manconi, Fausto Guzzetti, Martin Culshaw, Peter Bobrowsky, Fabio Luino, 2014-08-25 This book is one out of 8 IAEG XII Congress volumes and deals with the theme of urban geology. Along with a rapidly growing world population, the wave of urban growth continues, causing cities to swell and new metropolitan centers to emerge. These global trends also open new ventures for underground city development. Engineering geology plays a major role in facing the increasing issues of the urban environment such as finding aggregates for construction works, providing adequate water supply and waste management, solving building problems associated to geological and geomorphological conditions, evaluating host rock conditions for underground constructions, preventing or mitigating geological and seismic hazards. Furthermore, this book illustrates recent advancements in sustainable land use planning which includes conservation, protection, reclamation and landscape impact of open pit mining and alternative power generation. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19 2014 analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress: environment, processes, issues and approaches. The congress topics and subject areas of the 8 IAEG XII Congress volumes are: 1. Climate Change and Engineering Geology, 2. Landslide Processes, 3. River Basins, 4. Reservoir Sedimentation and Water Resources, 5. Marine and
