Lucky for one young cancer patient in 1956 that Henry Kaplan, had already come to Stanford with an unusual goal to turn a device used by the physicists on campus—the linear accelerator—into a tool for fighting cancer. That patient, a 2-year-old boy suffering from a tumor in his eye, was the first to undergo X-ray treatment from a medical linear accelerator that Kaplan developed with campus physicists. The treatment saved the child's sight and he lived the rest of his life with his vision intact.

It all came about because Kaplan thought he could find a way to focus intense X-rays to destroy a tumor without harming surrounding healthy tissues—and he thought the physicists would be the ones to help him do so. "In the 1950s, I began to hear cocktail party conversations about an interesting new *atom smasher* being developed on the campus by Bill Hanson and Edward Ginzton and their colleagues," Kaplan recalled in a 1983 interview, the year before his death.

Advances in Accelerators and Medical Physics Toshiyuki Shirai, Teiji Nishio, Kiyokazu Sato, 2023-05-25 Radiotherapy is now one of the major cancer treatments. The field of accelerator and medical physics is important and growing to support high precision cancer radiotherapy. Advances in Accelerators and Medical Physics provides in depth and comprehensive coverage of the basic concepts in x ray therapy, electron beam therapy, particle therapy, boron neutron capture therapy, and molecular imaging and therapy. Novel technologies such as FLASH therapy and laser ion accelerator are also introduced. Each section of the book presents the current state of accelerators, irradiation methods, and therapy technologies, as well as future trends in advanced research. This book will serve as a key resource for researchers and students to find all information on latest cancer radiotherapy technologies and methods. Offers a deep dive into fundamental accelerator and medical physics techniques and technologies used in cancer radiotherapy. Considers updated status at hospitals and clinical facilities and future research trends. Covers advanced research, development, and novel technologies. Alongi, Poonam Yadav, Bharat B. Mittal, 2024-03-20 This book offers a detailed guide to MR Linac, a unique and fast growing radiation treatment modality. MR linac is new technology that is a fusion of an MRI and a linear accelerator on the same gantry. It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment. Tumor location changes moment to moment as radiation is delivered, but this cannot be visualized in current radiation therapy practices. This new and rapidly growing technology can provide adaptive therapy that was not possible before. This book presents current knowledge on MR linac technology, clinical practices, and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor. There are two commercial MR linac machines under consideration, and both will be covered in detail. The book is divided into four sections. The first gives a general introduction to MR Linac, covering the role of MRI in radiation oncology, the clinical necessity of this technology, and patient selection. The next section details the physics and technology of MR Linac, covering image sequence, motion management, and treatment planning. Section three offers the clinical applications of MR Linac and is divided by body area, including lung, prostate, and breast. Finally, the fourth section looks to the future and what this technology can mean for radiation oncology. This is an ideal guide for radiation oncologists, medical physicists, and relevant trainees. **RF Linear**
