Advancing Nuclear Medicine Through Innovation:

Advancing Nuclear Medicine Through Innovation National Research Council, Institute of Medicine, Board on Health Sciences Policy Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on State of the Science of Nuclear Medicine, 2007-09-11 Nearly 20 million nuclear medicine procedures are carried out each year in the United States alone to diagnose and treat cancers, cardiovascular disease and certain neurological disorders. Many of the advancements in nuclear medicine have been the result of research investments made during the past 50 years where these procedures are now a routine part of clinical care. Although nuclear medicine plays an important role in biomedical research and disease management, its promise is only beginning to be realized. *Advancing Nuclear Medicine Through Innovation* highlights the exciting emerging opportunities in nuclear medicine which include assessing the efficacy of new drugs in development, individualizing treatment to the patient and understanding the biology of human diseases. Health care and pharmaceutical professionals will be most interested in this book's examination of the challenges the field faces and its recommendations for ways to reduce these impediments.

[Handbook on Radiation Environment, Volume 1](#) Dinesh Kumar Aswal, 2024-05-18 This handbook provides a comprehensive review of radiation present in the environment, its sources, dose measurement techniques, exposures in natural and man-made radiation environments, policies governing radiation safety, societal applications of radiation technology, radiological and nuclear events, preparedness, response and mitigation of radiation emergencies. It covers natural and man-made radiation environment with an emphasis on renewed interest in nuclear energy as a clean and green source of power generation. Additionally, it reviews various approaches to understand the fate and behaviour of radionuclides in the terrestrial and aquatic ecosystems. It also presents nuclear technology's diverse applications from diagnostic and therapeutic nuclear medicine to materials modifications and sustainable waste management strategies and the role of ionizing radiation in ensuring food security and safety. The handbook also highlights the existing internationally adopted radiation protection policies which are originated from linear no threshold (LNT) model of dose response characteristics. The scientific basis of LNT model and its limitations at low doses prompts a revision of the existing radiation protection policies for better utilization of the benefits of ionizing radiation. The handbook serves as a comprehensive resource for students, academicians, scientists, engineers and policymakers interested in seeking an in-depth knowledge of radiation and the multifaceted applications of radiation technology while protecting human health and the environment.
