Angiogenesis and Direct Myocardial Revascularization Roger J. Laham, Donald S. Baim, 2007-11-05 An interdisciplinary panel of pioneers and opinion leaders review the basic preclinical clinical and developmental pathways to new treatment strategies such as therapeutic angiogenesis and myogenesis The authors take advantage of new biological understanding novel therapeutic targets multiple available and well studied therapeutic strategies and the necessary imaging techniques to measure outcomes Their in depth discussions cover the identification of new therapeutic targets and pathways the investigation of transcriptional factors master switch molecules cell based approaches chemokines a better understanding of the effects of aging endothelial dysfunction and hypercholesterolemia in response to angiogenic stimuli Highlights include examination of drug delivery problems outcomes measure stem therapy high risk interventions development pathways and future possibilities

Stem Cells and Myocardial Regeneration Marc S. Penn, 2007-11-06 Over the past 5 years there has been great excitement and controversy in the scientific financial and lay literature for the potential of stem cell based strategies for the prevention and treatment of chronic heart failure CHF Not that long ago we believed we were born with a set number of cardiac myocytes and that once damaged there was no hope to replace them The interest in the field stems from the magnitude of cardiovascular disease in the world Our ability to treat and help patients survive acute myocardial infarction MI has resulted in a near epidemic of CHF There are more than 5 million Americans who currently carry the diagnosis of CHF With more than 1 million MIs a year in the United States there are approx 500 000 new cases of CHF diagnosed each year The goal of Stem Cells and Myocardial Regeneration is to present in a coherent manner the current state of knowledge of stem cell based therapies for cardiac dysfunction including current findings in both the laboratory and the clinic trials The first section of this Stem Cells and Myocardial Regeneration focuses on the magnitude of the problem and the successes and failures of what we consider optimal medical therapy It is on this background that stem cell based therapy needs to build

**Myocardial Revascularization: History, Methodology, Technology** Peter Whittaker, George S. Abela, 2012-12-06 The last five years have witnessed an increasing interest in the subject of transmyocardial laser revascularization TMR as illustrated by the number of abstracts presented at the meetings of the American Heart Association and the American College of Cardiology Figure The ideas and concepts associated with this particular method of myocardial revascularization have changed dramatically over even this short period of time The original premise of de evolving mammalian hearts to recreate a reptilian like myocardial circulation by making multiple channels through the myocardium has been almost but perhaps not quite completely dismissed Now the most popular notion is that there is an angiogenic response to myocardial channel making It is this development of new blood vessels that is thought to be responsible for the apparent improvements in symptoms and blood flow Along the way the idea that a channel could stay open and allow blood to flow directly from the ventricular chamber has found little support Rather than directly explore all of these issues and merely duplicate previously published articles our aim was to take a novel approach that is to step back from these arguments and provide perspective from the vantage point of distance In the case of trans myocardial revascularization distance comes both in terms of history and in terms of methodology and knowledge from other fields of research Historically innovative methods of myocardial revascularization are by no means uncommon The first two chapters deal with this historical perspective **The Annals of**

**Thoracic Surgery**, 1994-04 Doklady, 2006 Abridged Index Medicus, 1996 *Angiogenesis and Direct Myocardial Revascularization* (2005). , *Handbook of Myocardial Revascularization and Angiogenesis* Stephen E Epstein, Ran Kornowski, Martin B Leon, 1999-09-23 The rapid development of myocardial revascularization from angioplasty to stents and now to new laser technology has meant that there is an abundance of information available which has not been distilled into a user friendly format Confusion exists as to where we are with angiogenesis what can it do how do we do it what is acceptable as a satisfactory result Drs Kornowski Epstein and Leon answer the need for a concise reference on the subject They have assembled a team of internationally recognised experts who are at the forefront of research and clinical

application on myocardial revascularization and angiogenesis They examine direct transmyocardial and percutaneous approaches to revascularization In the latter part of the Handbook there is discussion about growth factors protein and gene therapy which should serve as a guide and provide background facts so as to ensure greater informational access to the interventional cardiologist
