

Angle & Arc Relationships Notes part 2

Angles formed by a tangent and a chord: any angle whose vertex is on the circle and has at least one side that contains a chord of the circle will have a measure equal to one half the measure of its intercepted arc.

intercepted arc

The measure of the angle is one half the measure of the intercepted arc.

If two inscribed angles of a circle intercept the same arc, then the angles are congruent.

The measure of $\angle ACD$ equals the measure of $\angle BAC$.

Examples: Find the value of each variable.
