Epizootics - Outbreaks of Animal Disease ,2025-02-05 When diseases occur in a human population at higher than expected levels those diseases are said to be epidemic Animals also experience outbreaks at levels greater than expected and when that happens it is called epizootic There have been several very large epizootics in recent years with one of the biggest being the West Nile virus expansion into the Americas This caused significant bird mortality and it expanded into the human population as well The effect of epizootics on human health is therefore of great importance Still epizootics can be extremely important even if humans are unaffected This book describes several recent epizootics discusses why they occurred and what kind of response may be necessary *Insights in Emerging or Re-emerging Zoonoses* Javier Caballero Gómez, Mustafa

Altindis, Santiago Mirazo ,Barbara Moroni,2024-07-31 More than sixty percent of emerging infectious diseases that affect humans are caused by zoonotic pathogens Over the last two centuries there have been many examples of zoonotic microorganisms that have caused important epidemics or pandemics around the world However currently zoonotic emerging infectious diseases are still or are even a higher threat for global health including animal public and environmental health probably due to factors such as globalization the increasing temperature of global health intensive agriculture or industrialization have favored the emergence or re emerging of these diseases among many others Today more than ever the high interconnection of human animals and the environment highlights the need of a One Health approach to understand aspects related with the transmission or control of these emerging pathogens This Research Topic aims to provide a collection of comprehensive articles of different areas of interest such as epidemiology diagnosis and pathology in infections caused by emerging or re emerging zoonotic pathogens including viruses parasites and bacteria in humans domestic animals and or wildlife The major areas to be included regarding emerging or re emerging zoonoses might be Epidemiology including research on host range transmission genetic diversity prevalence and distribution Pathology including clinical signs and lesions caused by the infection of emerging zoonotic pathogens Diagnosis including novel techniques of indirect or direct assays as well as novel approaches in the diagnosis of these pathogens Control of emerging zoonoses **Encyclopedia of**
