Animals That Start With Y:

Home Ranges of Animals Roger A. Powell, 2025-10-21 Animals have tremendous agency to understand the world around them and to plan how to take best advantage of that world to meet their requirements Their perception of the world differs from humans and includes knowledge emphasizing different senses This book argues that to understand animals home ranges which are integral to the behavior and ecology of animals biologists must understand their cognition of their environments Presenting diverse complementary approaches to studying home ranges this book shows how using multiple approaches sheds a broad light on how and why animals behave as they do The book also provides many examples showing how hypothesis driven research provides strong insights into animal behavior and ecology **The Journal of Animal Behavior** Robert Mearns Yerkes, 1917 **South American Primates** Paul A. Garber, Alejandro Estrada, Julio Cesar Bicca-Marques, Eckhard W. Heymann, Karen B. Strier, 2008-11-13 This will be the first time a volume will be compiled focusing on South American monkeys as models to address and test critical issues in the study of nonhuman primates In addition the volume will serve an important compliment to the book on Mesoamerican primates recently published in the series under the DIPR book series The book will be of interest to a broad range of scientists in various disciplines ranging from primatology to animal behavior animal ecology conservation biology veterinary science animal husbandry anthropology and natural resource management Moreover although the volume will highlight South American primates chapters will not simply review particular taxa or topics Rather the focus of each chapter is to examine the nature and range of primate responses to changes in their ecological and social environments and to use data on South American monkeys to address critical theoretical questions in the study of primate behavior ecology and conservation Thus we anticipate that the volume will be widely read by a broad range of students and researchers interested in prosimians New World monkeys Old World monkeys apes humans as well as animal behavior and tropical biology The Natural History of Animals James Richard Ainsworth Davis, 1903 **The Journal of Experimental Zoology** Ross Granville Harrison, William Keith Brooks, 1918 A separate section of the journal Molecular and developmental evolution is devoted to experimental approaches to evolution and development Collected Papers Osborn Zoological Laboratory, 1916 *Our Dumb Animals* George Thorndike Angell, 1889 **Principles of Veterinary Animal Physiology** Tanmoy Rana, 2025-10-22 This textbook for advanced graduate and postgraduate veterinary students introduces animal behaviour offering insights into its origins cognitive aspects communication environmental influences biological mechanisms complex behaviours adaptive strategies and practical applications The initial chapters present fundamental principles underpinning animal behaviour elucidating the roles of evolution genetics and ecology Subsequent chapters introduce the role of natural selection habitat selection and pheromones alongside exploring conflicts predator prey dynamics and the impact of domestication on behaviour The book further delves into topics such as habitat selection foraging strategies predator prey dynamics and the effects of

domestication on behaviour It unravels the mysteries of animal defences altruism social dominance territoriality and the finely tuned art of food and habitat selection Additionally it covers the biological mechanisms governing behaviour unearthing the roles played by neuroendocrinology biological clocks and genetics Towards the end the textbook examines the practical relevance of behavioural insights in veterinary science Key Features Offers a comprehensive exploration of animal behaviour encompassing a wide range of topics from evolutionary principles to intricate behavioural patterns Provides understanding of the origins of animal behaviour including the roles of evolution genetics and ecology Highlights the practical applications of behavioural insights in veterinary science and related fields Delves into specialized areas of animal behaviour such as innate behaviours animal memory pheromones and cooperation Explores how animals adapt to their environments covering topics like foraging behaviour predator detection and self defensive behaviours Addresses the impact of environmental factors hormones and drugs on behaviour offering a holistic view of animal responses to their surroundings

Walton, 2018-06-08 Drug addiction may be viewed as a form of learning during which strong associations linking actions to drug seeking are expressed as persistent stimulus response habits thereby maintaining a vulnerability to relapse Disrupting cue drug memory could be an efficient strategy to reduce the strength of cues in motivating drug taking behavior Upon reactivation these memories undergo a reconsolidation process that can be blocked pharmacologically providing an opportunity to prevent the powerful control of drug cues on behavior This conceptually elegant approach still calls for more experimental data However an increasing body of evidence suggests that drug taking not only accelerates habit forming but has long lasting effects on interactions between memory systems eventually leading to a functional imbalance The dorsal part of the striatum plays a critical role in habit procedural learning whereas the hippocampal memory system encodes relationships between events and their later flexible use Both humans and rodents studies support the view that the hippocampus and the dorsal striatum interact in either a cooperative or competitive manner during learning the prefrontal cortex being involved in the selection of an appropriate learning strategy Chronic drug consumption biases normal interactions between these memory systems For instance drug experienced rodents tend to use preferentially striatum dependent learning strategies in navigational tasks These persistent effects seem to occur at cellular neurophysiological and behavioral levels to promote specific striatal dependent forms of learning to the detriment of spatial declarative hippocampal dependent and more flexible types of memory Whether cue sensitive and response learners in contrast to spatial learners could be prone to drug addiction is an intriguing hypothesis which clearly deserves to be further explored A loss of flexibility may be uncovered also by imposing changing rules on the subject such as requiring an attentional shift between different

perceptual features of a complex stimulus as in the attentional set shifting task which was recently adapted to rodents
 Working memory is at risk during transition phases although it remains to be determined whether withdrawal induced
 alterations are observed also during protracted abstinence Drug induced cognitive biases thus lead to cognitive rigidity
 which could play a critical yet overlooked role in different phases of addiction acquisition extinction withdrawal and relapse
 They are also likely to preclude the clinical efficiency of treatments Therefore the aim of this research topic is to provide an
 overview of the current work investigating the long term impact of drug use on learning and memory processes how multiple
 memory systems modulate drug seeking behavior as well as how drug induced cognitive biases could contribute to the
