**Advances in Experimental Political Philosophy** Matthew Lindauer, 2023-09-21 Political philosophy asks questions of great importance to our lives both as individuals and members of political communities What is justice What does the state owe to its citizens Under which conditions are different forms of government likely to be stable The relevance of empirical research to such questions however has been largely underexplored Introducing experimental political philosophy as a burgeoning field of inquiry this volume brings together leading scholars using empirical methods to shed light on questions of justice and politics and encourages them to reflect on the relationship of their methodologies to less empirically focused approaches Chapters cover traditional topics including distributive justice egalitarianism property rights and healthcare justice as well as outlining new directions and applications such as the problem of misogynistic extremist movements the public justification of immigration enforcement and the relationship between gender norms and support for care labor organizing The result is a unique collection that paves the way for further debates in the field and meaningful reflection on what it means for political philosophy to be empirically informed      *New Insights into the Theory of Giffen Goods* Wim Heijman, Pierre Mouche, 2011-10-12 One might expect that after their identification in the 19th century all aspects of Giffen goods would have been studied by now This appears not to be the case This book contains the latest insights into the theory of Giffen goods In the past surprisingly few goods could be categorized as Giffen This may be because of a lack of understanding of the character of these goods Therefore the theories explained in this book may also produce a solid basis for further empirical research in the field Experts throughout the world have contributed to this book which predominantly

pursues a mathematically rigorous approach It may be used by researchers in the field of fundamental economics and in graduate level courses in advanced microeconomics

**Network Economics and the Allocation of Savings** Philipp Servatius, 2011-10-20 This book provides a game theoretic model of interaction among VoIP telecommunications providers regarding their willingness to enter peering agreements with one another The author shows that the incentive to peer is generally based on savings from otherwise payable long distance fees At the same time termination fees can have a countering and dominant effect resulting in an environment in which VoIP firms decide against peering Various scenarios of peering and rules for allocation of the savings are considered The first part covers the relevant aspects of game theory and network theory trying to give an overview of the concepts required in the subsequent application The second part of the book introduces first a model of how the savings from peering can be calculated and then turns to the actual formation of peering relationships between VoIP firms The conditions under which firms are willing to peer are then described considering the possible influence of a regulatory body
