**Advances in Food Mycology** Ailsa D. Hocking, John I. Pitt, Robert A. Samson, Ulf Thrane, 2006-08-29 This book represents the Proceedings of the Fifth International Workshop on Food Mycology which was held on the Danish island of Sams from 15-19 October 2003. This series of Workshops commenced in Boston USA in July 1984 from which the proceedings were published as Methods for Mycological Examination of Food edited by A D King et al published by Plenum Press New York 1986. The second Workshop was held in Baarn the Netherlands in August 1990 and the proceedings were published as Modern Methods in Food Mycology edited by R A Samson et al and published by Elsevier Amsterdam 1992. The Third Workshop was held in Copenhagen Denmark in 1994 and the Fourth near Uppsala Sweden in 1998. The proceedings of those two workshops were published as scientific papers in the International Journal of Food Microbiology. International Workshops on Food Mycology are held under the auspices of the International Commission on Food Mycology a Commission under the Mycology Division of the International Union of Microbiological Societies. Details of this Commission are given in the final chapter of this book. This Fifth Workshop was organised by Ulf Thrane, Jens Frisvad, Per V Nielsen and Birgitte Andersen from the Center for Microbial Biotechnology Technical University of Denmark Kgs Lyngby, Denmark. **Fungi and Food Spoilage** John I. Pitt, Ailsa D. Hocking, 2022-09-02 The first three editions of Fungi and Food Spoilage established then consolidated a reputation as the leading book on foodborne fungi. It details media and methods for isolation and identification, descriptions of species and information on their physiology, ecology and mycotoxin formation. It is an invaluable reference for food microbiologists investigating fungal food spoilage problems both in field crops and processed foods and the likelihood of mycotoxin production in either. The Fourth Edition incorporates major differences from the Third, multiple changes in nomenclature due to changes in the International Code of Nomenclature for algae, fungi and plants, many taxonomic changes due to improvements in and more widespread application of molecular methods in taxonomy, the introduction of colour colony photographs where appropriate and a new chapter on mycotoxins. The introductory chapters of the book deal with the ecology of food spoilage and provide an overview of how food processing, packaging and storage parameters influence fungal growth. A subsequent chapter overviews the fundamentals of naming and classifying fungi. Morphological methods and media suitable for low cost and effective isolation, enumeration and identification of foodborne fungi are provided together with many more specialised media and techniques. The major part of the book provides keys, descriptions and illustrations of all yeasts and filamentous fungi commonly encountered in foods. Other known characteristics of the species including physiology and ecology are included. Chapters on the types and species of fungi likely to be found in fresh, harvested and variously processed foods are followed by a new chapter on mycotoxins, both major and minor, their sources, both fungal and food, and their implications for human health. The broad and practical nature of the coverage will appeal to microbiologists, mycologists and biotechnologists in the food industry as well as scientists in academic research and public health institutions. Drs Pitt and

Hocking worked for CSIRO Food for more than 100 years combined Both are now retired from CSIRO Dr Pitt continues to work part time with Microbial Screening Technologies a biodiscovery company Modern Methods in Food Mycology R.A. Samson,1992-10-20 The main thrust of this book is on development of better testing methods for the detection and enumeration of fungi in foods The final goal is to standardise methods with resulting improvements in communications interpretation of results between laboratories and improved facilitation of international commerce The work comprises nine collaborative studies and 40 individual articles It finds its origin in a workshop that was held in the Netherlands where recommendations for methods to be adopted were prepared and agreed on These are summarised at the end of this book together with a section on the mycological methods and media considered with current knowledge to be the most satisfactory available Anyone dealing with the problems of fungi in foods will find this book a valuable practical aid The contents of the book is provided in detail hereunder *Fungi and Food Spoilage* John I.
