Progress in Ultrafast Intense Laser Science I See Leang Chin,Pierre Agostini,Gaetano Ferrante,2006-10-03 This is the first of a series of books on Ultrafast Intense Laser Science a newly emerging interdisciplinary research field that spans atomic and molecular physics molecular science and optical science It covers intense VUV laser cluster interaction resonance and chaos assisted tunneling and the effects of the carrier envelope phase on high order harmonic generation

Advance Elements of Laser Circuits and Systems Ofer Aluf,2021-03-09 This book on Advance Elements of Laser circuits and systems Nonlinearity applications in engineering addresses two separate engineering and scientific areas and presents advanced analysis methods for Laser circuits and systems that cover a broad range of engineering and scientific applications The book analyzed Laser circuits and systems as linear and nonlinear dynamical systems and there limit cycles bifurcation and limit cycle stability by using nonlinear dynamic theory Further it discussed a broad range of bifurcations related to Laser systems and circuits starting from laser system differential equations and their bifurcations delay differential equations DDEs are a function of time delays delay dependent parameters followed by phase plane analysis limit cycles and their bifurcations chaos iterated maps period doubling It combines graphical information with analytical analysis to effectively study the local stability of Laser systems models involving delay dependent parameters Specifically the stability of a given steady state is determined by the graphs of some functions of which can be expressed explicitly The Laser circuits and systems are Laser diode circuits MRI system Laser diode circuitry Electron photon exchanges into VCSEL Ti Sapphire laser systems Ion channel and long wavelength lasers Solid state lasers Solid state laser controlled by semiconductor devices microchip solid state laser Q switched diode pumped solid state laser Nd YAG Mid Infrared and Q switched microchip lasers Gas laser systems copper vapor laser CVL circuitry Dual wavelength laser systems Dual wavelength operation of a Ti sapphire laser Diode pumped Q switched Nd YVO4 yellow laser Asymmetric dual quantum well lasers Tm3 doped silica fibre lasers Terahertz dual wavelength quantum cascade laser The Book address also the additional areas Laser X guiding system Plasma diagnostics Laser Beam shaping Jitter and crosstalk Plasma mirror systems and High power Laser Target diagnostic system optical elements The book is unique in its emphasis on practical and innovative engineering and scientific applications All conceptual Laser circuits are innovative and can be broadly implemented in many engineering applications The dynamics of Laser circuits and systems provides several ways to use them in a variety of applications covering wide areas This book is aimed at electrical and electronics engineers students and

researchers in physics as well. It is also aimed for research institutes in lasers and plasma physics and gives good comprehensive in laser and plasma systems. In each chapter the concept is developed from basic assumptions up to the final engineering and scientific outcomes. The scientific background is explained at basic and advance levels and closely integrated with mathematical theory. Many examples are presented in this book and it is also ideal for intermediate level courses at graduate level studies. It is also ideal for engineer who has not had formal instruction in nonlinear dynamics but who now desires to fill the gap between innovative Laser circuits systems and advance mathematical analysis methods. Progress in Ultrafast Intense Laser Science II See Leang Chin, Pierre Agostini, Gaetano Ferrante, 2007-06-10. The world is filled with light and no doubt we have developed our idea of nature by seeing matters that is by irradiating matters with light. When increasing the intensity of light we realized recently that a variety of new and hitherto unimaginable phenomena emerge. In rapid succession above threshold ionization Coulomb explosion selective chemical bond breaking high order harmonic generation into deep XUV generation of short pulsed 18 X ray lamination and light pulse shortening into the attosecond 10 s time domain have been reported. Light has gained a new function which is to change the character of matter itself and the consequences have triggered a lot of enthusiasm discussions and collaborations among the researchers. A series of annual meetings International Symposium on Ultrafast intense Laser Science <http://www.isuils.jp> with which this new Springer sub series collaborates was designed to stimulate further interdisciplinary interactions at the forefront of research aiming at expanding the frontiers of the field. The first ISUILS was held in Tokyo in 2002 featuring the issue of control of molecules in intense laser fields and the second ISUILS was held the next year in Quebec City. From this ISUILS2 we started honoring distinguished researchers who have contributed to the establishment of the basis of this new research field. Prof Hiroshi Takuma Tokyo and Prof Gérard Mainfray Saclay served as Honorary Co chairs at ISUILS2 and Prof Leonid Keldysh Moscow and Prof Orazio Svelto Milano at ISUILS3 held in Palermo in 2004.

Progress in Ultrafast Intense Laser Science VII Kaoru Yamanouchi, Dimitrios Charalambidis, Didier Normand, 2011-05-07. The PUILS series delivers up to date reviews of progress in Ultrafast Intense Laser Science a newly emerging interdisciplinary research field spanning atomic and molecular physics molecular science and optical science which has been stimulated by the recent developments in ultrafast laser technologies. Each volume compiles peer reviewed chapters authored by researchers at the forefront of each their own subfields of UILS. Every chapter begins with an overview of the topics to be discussed so that researchers unfamiliar to the subfield as well as graduate students can grasp the importance and attractions of the research topic at hand. These are followed by reports of cutting edge discoveries. This seventh volume covers a broad range of topics from this interdisciplinary research field focusing on the ionization of atoms and molecules ultrafast responses of protons and electrons within a molecule molecular alignment high order harmonics and attosecond pulse generation and acceleration of
