Animal Behaviour David McFarland,1989 **Animal Behavior** David McFarland,1985 **Evolutionary Psychology** Lance Workman,Will Reader,2021-05-20 While evolutionary psychology is a fascinating science it is also often misunderstood In this highly acclaimed undergraduate textbook Workman and Reader assume no prior knowledge of evolution and instead carefully guide students towards a level of understanding where they can critically apply evolutionary theory to psychological explanation The authors provide an engaging and balanced discussion of evolutionary psychology without committing to a specific school of thought and organise chapters around topics familiar to psychology students Retaining the successful structure and pedagogy of previous editions the text has been updated to include the latest advances in the field with new material added on homosexuality a consideration of feminist criticism grandparental investment and developments in neuroscience and epigenetics The fourth edition is now in full colour with new figures and photographs revised boxed case studies additional discussion questions and an updated online test bank

Mechatronics in Action David Bradley,David W. Russell,2010-04-15 Mechatronics in Action s case study approach provides the most effective means of illustrating how mechatronics can make products and systems more flexible more responsive and possess higher levels of functionality than would otherwise be possible The series of case studies serves to illustrate how a mechatronic approach has been used to achieve enhanced performance through the transfer of functionality from the mechanical domain to electronics and software Mechatronics in Action not only provides readers with access to a range of case studies and the experts view of these but also offers case studies in course design and development to support tutors in making the best and most effective use of the technical coverage provided It provides in an easily accessible form a means of increasing the understanding of the mechatronic concept while giving both students and tutors substantial technical insight into how this concept has been developed and used

Behavioral Neurobiology Günther K. H. Zupanc,2010-05-13 Shaun D Cain The Journal of Experimental Biology Book Jacket *Gaining Control* Robert Aunger,Valerie Curtis,2015-03-26 Gaining control tells the story of how human behavioral capacities evolved from those of other animal species Exploring what is known about the psychological capacities of other groups of animals the authors reconstruct a fascinating history of our own mental evolution In the book the authors see mental evolution as a series of steps in which new mechanisms for controlling behavior develop in different species starting with early representatives of this kingdom and leading to a species us that can engage in a large number of different types of behavioral control Key to their argument is the idea that each of these steps from reflexes to

instincts drives emotions and cognitive planning can be seen as a novel type of psychological adaptation in which information is inherited by an animal from its own behavior through new forms of learning a form of major evolutionary transition Thus the mechanisms that result from these steps in increasingly complex behavioral control can also be seen as the fundamental building blocks of psychology Such a perspective on behaviour has a number of implications for practitioners in fields ranging from experimental psychology to public health Short provocative and insightful this book will be of great interest and use to evolutionary psychologists and biologists anthropologists and the scientific community as a whole **Using The**
